**Artificial Psychology** Clayton Lewis,2025-02-19 The success of predictive large language models PLLMs like GPT3 and ChatGPT has created both enthusiasts and skeptics of their widespread practical applications but this book argues that the larger significance of such models is contained in what they suggest about human cognition To explore this potential the book develops a thought experiment called the Prediction Room a reference to John Searle s influential Chinese Room argument in which a human agent processes language by following a set of opaque written rules without possessing an inherent understanding of the language The book proposes a new Room model the Prediction Room with its resident Prediction Agent generalizing the working of large language models Working through a wide range of topics in cognitive science the book challenges the conclusion of Searle s thought experiment that discredited contemporary artificial intelligences AI through the suggestion that the Prediction Room offers a means of exploring how new ideas in AI can provide productive alternatives to traditional understandings of human cognition In considering the implications of this the book reviews an array of topics and issues in cognitive science to uncover new ideas and reinforce older ideas about the mental mechanisms involved in both sides The discussion of these topics in the book serves two purposes First it aims to stimulate new thinking about familiar topics like language acquisition or the nature and acquisition of concepts Second by contrasting human psychology with the form of artificial psychology these models exhibit it uncovers how new directions in the development of these systems can be better explored

**Mathematics and Education in an AI Era** Dragana Martinovic, Marcel Danesi, 2025-04-25 This book focuses on the potential contributions of Artificial Intelligence AI for enhancing mathematics education It includes rationales for an AI oriented pedagogical model such as interdisciplinarity and even sensitivity to crucial world issues such as climate change The chapters in this book highlight what the new age of mathematics education entails concretely covering themes from the utilization of AI directly into classroom pedagogy and the semiotic consequences of what this entails to how mathematics training can be tailored to get students to relate concretely to problems of climate change and to understand the relevance of the differences between symmetry and asymmetry as psychological constructs The overall picture we can glean from these chapters is not mere eclecticism but an integration of disciplinary perspectives into a holistic framework that has great relevance and resonance for mathematics education in the age of AI

**Empire of AI** Karen Hao, 2025-05-20

A New York Times Notable Book Finalist for the National Book Critics Circle Award An Instant New York Times Bestseller Named a Best Book of the Year by Smithsonian and Scientific American A bestselling page turner that has made waves not just in Silicon Valley but around the world With Empire of AI Hao is fundamentally shaping many people's perceptions and understanding of the company at the center of the AI revolution TIME Magazine TIME100 AI 2025 Excellent and deeply reported Tim Wu The New York Times Startling and intensely researched an essential account of how OpenAI and ChatGPT came to be and the catastrophic places they will likely take us Vulture From a brilliant longtime AI insider with intimate access to the world of Sam Altman's OpenAI from the beginning an eye opening account of arguably the most fateful tech arms race in history reshaping the planet in real time from the cockpit of the company that is driving the frenzy When AI expert and investigative journalist Karen Hao first began covering OpenAI in 2019 she thought they were the good guys Founded as a nonprofit with safety enshrined as its core mission the organization was meant its leader Sam Altman told us to act as a check against more purely mercantile and potentially dangerous forces What could go wrong Over time Hao began to wrestle ever more deeply with that question Increasingly she realized that the core truth of this massively disruptive sector is that its vision of success requires an almost unprecedented amount of resources the compute power of high end chips and the processing capacity to create massive large language models the sheer volume of data that needs to be amassed at scale the humans cleaning up that data for sweatshop wages throughout the Global South and a truly alarming spike in the usage of energy and water underlying it all The truth is that we have entered a new and ominous age of empire only a small handful of globally scaled companies can even enter the field of play At the head of the pack with its ChatGPT breakthrough how would OpenAI resist such temptations Spoiler alert it didn't Armed with Microsoft's billions OpenAI is setting a breakneck pace chased by a small group of the most valuable companies in human history toward what end not even they can define All

this time Hao has maintained her deep sourcing within the company and the industry and so she was in intimate contact with the story that shocked the entire tech industry Altman's sudden firing and triumphant return. The behind the scenes story of what happened told here in full for the first time is revelatory of who the people controlling this technology really are. But this isn't just the story of a single company; however, fascinating it is, the forces pressing down on the people of OpenAI are deforming the judgment of everyone else too, as such forces do. Naked power finds the ideology to cloak itself; no one thinks they're the bad guy. But in the meantime, as Hao shows through intrepid reporting on the ground around the world, the enormous wheels of extraction grind on. By drawing on the viewpoints of Silicon Valley engineers, Kenyan data laborers, and Chilean water activists, Hao presents the fullest picture of AI and its impact we've seen to date alongside a trenchant analysis of where things are headed. An astonishing eyewitness view from both up in the command capsule of the new economy and down where the real suffering happens. Empire of AI pierces the veil of the industry defining our era.

### **Introduction to Digital Humanism**

Hannes Werthner, Carlo Ghezzi, Jeff Kramer, Julian Nida-Rümelin, Bashar Nuseibeh, Erich Prem, Allison Stanger, 2023-12-20. This open access textbook introduces and defines digital humanism from a diverse range of disciplines. Following the 2019 Vienna Manifesto, the book calls for a digital humanism that describes, analyzes, and most importantly, influences the complex interplay of technology and humankind for a better society and life, fully respecting universal human rights. The book is organized in three parts. Part I, *Background*, provides the multidisciplinary background needed to understand digital humanism in its philosophical, cultural, technological, historical, social, and economic dimensions. The goal is to present the necessary knowledge upon which an effective interdisciplinary discourse on digital humanism can be founded. Part II, *Digital Humanism: A System's View*, focuses on an in-depth presentation and discussion of the main digital humanism concerns arising in current digital systems. The goal of this part is to make readers aware and sensitive to these issues.

including e g thecontrol and autonomy of AI systems privacy and security and the role of governance Part III Critical and Societal Issues of Digital Systems delves into critical societal issues raised by advances of digital technologies While the public debate in the past has often focused on them separately especially when they became visible through sensational events the aim here is to shed light on the entire landscape and show their interconnected relationships This includes issues such as AI and ethics fairness and bias privacy and surveillance platform power and democracy This textbook is intended for students teachers and policy makers interested in digital humanism It is designed for stand alone and for complementary courses in computer science or curricula in science engineering humanities and social sciences Each chapter includes questions for students and an annotated reading list to dive deeper into the associated chapter material The book aims to provide readers with as wide an exposure as possible to digital advances and their consequences for humanity It includes constructive ideas and approaches that seek to ensure that our collective digital future is determined through human agency
