for Green Remediation provides a comprehensive account of sustainable microbial treatment technologies The research
presented highlights the significantly important microbial species involved in remediation the mechanisms of remediation by
various microbes and suggestions for future improvement of bioremediation technology The introduction of contaminants due
to rapid urbanization and anthropogenic activities into the environment causes unsteadiness and distress to the
physicochemical systems including living organisms Hence there is an immediate global demand for the diminution of such
contaminants and xenobiotics which can otherwise adversely affect the living organisms Over time microbial remediation
processes have been accelerated to produce better eco friendlier and more biodegradable products for complete
dissemination of these xenobiotic compounds The advancements in microbiology and biotechnology lead to the launch of
microbial biotechnology as a separate area of research and contributed dramatically to the development of the areas such as
agriculture environment biopharmaceutics and fermented foods Microbes stand as an imperative efficient green and
economical alternative to conventional treatment technologies The proposed book provides cost effective and sustainable
alternatives This book serves as a reference for graduate and postgraduate students in environmental biotechnology and
microbiology as well as researchers and scientists working in the laboratories and industries involved in research related to
microbiology environmental biotechnology and allied research Discusses important microbial activities such as biofertilizer
