- To replace the lithium battery, remove the cover from the lithium battery cover and insert the battery with the + side facing up. Replace the cover by screwing it back in place. Replacing both the AAA batteries and lithium battery at the same time is not recommended.

Setting Modes

Mode settings interpret how the TI-84 Plus displays and determines numbers and graphs. To change modes, press \square . Then use the arrow keys \square \square \square and press \square when the desired setting is highlighted.

- Normal notation:** "Normal" displays numerical expressions in standard form. "Sci" displays numerical expressions in scientific notation, using an "E" to display the power of 10. "Eng" displays numerical expressions in engineering notation, which is similar to scientific notation but allows three digits before the decimal point.
- Number of decimal places:** "Float" displays up to 10 digits after a decimal point (up to when the decimal terminates). The numbers 0 through 9 display that particular number of digits to the right of the decimal (including trailing zeros). This applies to answers displayed on the home screen, coordinates on a graph, coefficients in regression equations, and calculated results under various other menus.
- Unit of angle measures:** "Radian" interprets angle values as radians, and "Degree" interprets angle values as degrees. This is used primarily with trigonometric functions and polar and rectangular coordinates.
- Type of graphings:** "Func" is used when graphing functions where Y is a function of X . "Par" is used when graphing parametric functions where X and Y are functions of T . "Pol" is used when graphing functions where r is a function of θ . "Seq" is used when graphing sequences.
- Graph point displays:** "Connected" shows a line that connects each point calculated for each function. "Dot" plots each point calculated for each function.
- Graph window:** "Horizontal" shows one function completely before any other function is shown. "Normal" shows values for all functions for a single value of X , then shows values for all functions for the next value of X , etc.
- Complex number activation:** "Real" does not display complex numbers when complex numbers are entered. "a+bi" and "re^i\theta" display complex numbers in the corresponding form as complex numbers arise in calculations.
- Screen displays:** "Full" uses the entire screen as a display. "Mosaic" displays graphs on the top half of the screen and the home screen or other editor on the bottom half of the screen. "G-Y" displays graphs on the left half of the screen and the corresponding table on the right half.

Screen operating systems also include modes for output printing, fraction format and decimal output, advanced graph format, statistical diagnostics, and clock information.

Display Cursors

There are a variety of cursors that appear on the TI-84 Plus screen. How the cursor appears affects how the calculator interprets the next key pressed.

- Entry cursor:** \blacksquare This is the default cursor. When this cursor is displayed, any entering character is unambiguous.
- Invert cursor:** \blacksquare This is activated by pressing \square \square . When this cursor is displayed, a character is inserted at the cursor location.
- Normal cursor:** \blacksquare This is activated by pressing \square . When this cursor is displayed, the functions listed in blue on the keyboard are activated when pressed.
- Alpha cursor:** \blacksquare This is activated by pressing \square . When this cursor is displayed, the characters listed in green on the keyboard are activated when pressed. **NOTE:** This cursor also activates the alpha command when \square is pressed. The alpha cursor may be locked by pressing \square \square \square .
- Full cursor:** \blacksquare This indicates that the maximum number of characters have been entered or that the memory is full. **NOTE:** Other cursors may be displayed in graphing format and other applications.
