For all readers interested in time series analysis. *Introduction to Multiple Time Series Analysis* Helmut Lütkepohl, 1993-08-13. This graduate level textbook deals with analyzing and forecasting multiple time series. It considers a wide range of multiple time series models and methods. The models include vector autoregressive, vector autoregressive moving average, cointegrated, and periodic processes as well as state space and dynamic simultaneous equations models. Least squares, maximum likelihood, and Bayesian methods are considered for estimating these models. Different procedures for model selection or specification are treated and a range of tests and criteria for evaluating the adequacy of a chosen model are introduced. The choice of point and interval forecasts is considered and impulse response analysis, dynamic multipliers, as well as innovation accounting are presented as tools for structural analysis within the multiple time series context. This book is accessible to graduate students in business and economics. In addition, multiple time series courses in other fields such as statistics and engineering may be based on this book. Applied researchers involved in analyzing multiple time series may benefit from the book as it provides the background and tools for their task. It enables the reader to perform his or her analyses in a gap to the difficult technical literature on the topic. **Introduction to Time Series Analysis** Mark Pickup, 2014-10-15. Introducing time series methods and their application in social science research, this practical guide to time series models is the first in the field written for a non-econometrics audience. Giving readers the tools they need to apply models to their own research, *Introduction to Time Series Analysis* by Mark Pickup demonstrates the use of and the assumptions underlying common models of time series data, including finite distributed lag, autoregressive distributed lag, moving average, differenced data, and GARCH, ARMA, ARIMA, and error correction models. This volume does an excellent job of introducing modern time series analysis to social scientists who are already familiar with basic statistics and the general linear model. William G. Jacoby, Michigan State University.
