cannot allocate risk capital properly price and hedge derivative securities realistically or risk manage positions from the multiple perspectives of market risk credit risk counterparty risk and systemic risk The book assumes a working knowledge of calculus statistics and Excel but it teaches techniques from statistical analysis probability and stochastic processes sufficient to enable the reader to calibrate probability distributions and create the simulations that are used on Wall Street to value various financial instruments correctly model the risk dimensions of trading strategies and perform the numerically intensive analysis of risk measures required by various regulatory agencies

The Application of Volatility related Exchange Traded Products as Instruments for Volatility Hedging Lennart Berning, 2016-05-09 Bachelor Thesis from the year 2016 in the subject Business economics Banking Stock Exchanges Insurance Accounting grade 1.0 Nürtingen University language English abstract Besides stocks bonds cash commodities or real estate volatility emerged as its own asset class in recent years The last major financial crisis and increasing market volatility raised this topic to a new level Studies have shown that volatility tends to be negatively correlated to stock market returns In other words when stock markets plunge volatility tends to increase and vice versa The development of the global financial markets and the introduction of Exchange Traded Products ETPs opened the markets to a wide range of investors even to non professional investors The increasing interest in volatility linked products led ETP issuers to the introduction of volatility related products Volatility ETPs seek to track a specific index in many cases sub indices that track the performance of the Chicago Board Options Exchange Volatility Index VIX while providing all the advantages of a globally traded ETP such as highly liquid markets market makers all over the world tight spreads low costs and assets held as security funds These advantages compared to other volatility strategies via options or listed warrants make volatility ETPs a very attractive tool for portfolio managers The aim of this paper is to introduce the reader to the topic of volatility as an asset class respectively to volatility ETPs their construction price behavior and characteristics What is more since the vast majority of research dealing with volatility hedging focuses on option or futures based strategies there has not been done much research on the hedging efficiency and effectiveness of volatility linked ETPs as hedging instruments yet The analyzed question is therefore How efficient are volatility hedges through volatility linked ETPs compared to hedges through the VIX

VC Index Performance. Performance of Publicly Traded Venture Capital Indices Noah Paul, 2023-10-17 Master's Thesis from the year 2021 in the subject Business economics Investment and Finance grade 8.1 10 TiasNimbas Business School course Investment Management language English abstract The purpose of this study is to examine the performance of publicly traded Venture capital indices As these indices have become available to the public in 2012 allowing investors globally to gain exposure to the Venture Capital asset class It is of note that the indices were conceived in 1996 but only became available to the public in 2012 This raises the question if these Index funds are able to provide attractive returns or even beat the market In order to answer this question archival price datasets have been extracted for VC indices various benchmark indices and analyzed using the Sharpe ratio and Jensen

s alpha The data extracted covers a 25 year time frame from 1995 2021 and is extracted in both monthly and annual time intervals Using this approach the research finds that one of the VC indices exceeds market risk adjusted returns in terms of the Sharpe ratio and Jensen s alpha in net and gross returns This finding contradicts the academic theory and should not be possible The other VC index show significant underperformance using both measures To conclude it is not possible to make any general statements using the present sample In regard to VC index performance Therefore it is suggested that further empirical research is conducted using a larger sample of VC indices while the outperformance of the TRVCINX is also investigated as it stands in contrast to the academic literature **The CPA Journal** ,2008 **Excel Formulas and**
