Spatial Database Systems Albert K.W. Yeung,G. Brent Hall,2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook

Data Warehouse Systems Alejandro Vaisman,Esteban Zimányi,2014-09-10 With this textbook Vaisman and Zim nyi deliver excellent coverage of data warehousing and business intelligence technologies ranging from the most basic principles to recent findings and applications To this end their work is structured into three parts Part I describes Fundamental Concepts including multi dimensional models conceptual and logical data warehouse design and MDX and SQL OLAP Subsequently Part II details Implementation and Deployment which includes physical data warehouse design data extraction transformation and loading ETL and data analytics Lastly Part III covers Advanced Topics such as spatial data warehouses trajectory data warehouses semantic technologies in data warehouses and novel technologies like Map Reduce column store databases and in memory databases As a key characteristic of the book most of the topics are presented and illustrated using application tools Specifically a case study based on the well known Northwind database illustrates how the concepts presented in the book can be implemented using Microsoft Analysis Services and Pentaho Business Analytics All chapters are summarized using review questions and exercises to support comprehensive student learning Supplemental material to assist instructors using this book as a course text is available at <http://cs.ulb.ac.be/DWSDIbook> including electronic versions of the figures solutions to all exercises and a set of slides accompanying each chapter Overall students practitioners and researchers alike will find this book the most comprehensive reference work on data warehouses with key topics described in a clear and educational style

Geographic Information Science and Systems Paul A. Longley,Michael F. Goodchild,David J. Maguire,David W. Rhind,2015-03-09 Effective use of today s powerful GIS

technology requires an understanding of the science of problem solving that underpins it Since the first edition published over a decade ago this book has led the way with its focus on the scientific principles that support GIS usage It has also provided thorough upto date coverage of GIS procedures techniques and public policy applications This unique combination of science technology and practical problem solving has made this book a best seller across a broad spectrum of disciplines This fully updated 4th edition continues to deliver on these strengths *Context-Aware Mobile and Ubiquitous Computing for Enhanced Usability: Adaptive Technologies and Applications* Stojanovic, Dragan,2009-04-30 Provides research developments on mobile technologies and services Explains how users of such applications access intelligent and adaptable information services maximizing convenience and minimizing intrusion Location- and Context-Awareness Jeffrey Hightower,Bernt Schiele,Thomas Strang,2007-09-14 This book constitutes the refereed proceedings of the Third International Symposium on Location and Context Awareness LoCA 2007 held in Oberpfaffenhofen Germany in September 2007 The papers are organized in topical sections on wifi location technology activity and situational awareness taxonomies architectures and in a broader perspective the meaning of place radio issue in location technology and new approaches to location estimation **Spatial Modeling in Forest Resources Management** Pravat Kumar Shit,Hamid Reza Pourghasemi,Pulakesh Das,Gouri Sankar Bhunia,2020-10-08 This book demonstrates the measurement monitoring mapping and modeling of forest resources It explores state of the art techniques based on open source software R statistical programming and modeling specifically with a focus on the recent trends in data mining machine learning techniques and robust modeling in forest resources Discusses major topics such as forest health assessment estimating forest biomass carbon stock land use forest cover LUFC dynamic vegetation modeling DVM approaches forest based rural livelihood habitat suitability analysis biodiversity and ecology and biodiversity the book presents novel advances and applications of RS GIS and R in a precise and clear manner By offering insights into various concepts and their importance for real world applications it equips researchers professionals and policy makers with the knowledge and skills to tackle a wide range of issues related to geographic data including those with scientific societal and environmental implications **Political Economies of Landscape Change** James L. Jr Wescoat,Douglas M. Johnston,2007-12-05 Places of Power Political Economies of Landscape Change asks how politics and economics transform the landscapes we inhabit This volume explores the connections between political economy and landscape change through a series of conceptual essays and case studies In so doing it speaks to a broad readership of landscape architects geographers and related fields of social and environmental research The book consists of an introductory essay with nine chapters commissioned from leading geographers landscape architects political scientists and economists and a concluding essay on implications for future landscape inquiry and design The book is organized in three major sections Part one titled Landscapes of Struggle Possibility and Prosperity includes a chapter on new axioms for reading the landscape followed by two chapters that read processes of economic development and distress in

mountain landscapes of the U S and South America Part Two on Political and Economic Driving Forces of Landscape Change includes two chapters each on political driving forces political constructs and institutions and economic driving forces environmental economics and global financial markets Part Three titled Integrative Landscape Change compares innovative rural landscape policies in Europe and the U S and draws implications for future landscape inquiry planning and design

Design and Implementation of a Spatial Data Base System Chiu Jen Hsiao,1993 Spatial Databases Philippe Rigaux,Michel Scholl,Agnès Voisard,2001-05-30 Spatial Databases is the first unified in depth treatment of special techniques for dealing with spatial data particularly in the field of geographic information systems GIS This book surveys various techniques such as spatial data models algorithms and indexing methods developed to address specific features of spatial data that are not adequately handled by mainstream DBMS technology The book also reviews commercial solutions to geographic data handling ArcInfo ArcView and Smallworld GISs and two extensions to the relational model PostgreSQL and Oracle Spatial The authors examine these underlying GIS technologies assess their strengths and weaknesses and consider specific uses for which each product is best suited Examines the strengths of various query languages and approaches to query processing Explains the use of computational geometry in spatial databases GISs providing necessary background and an in depth look at key algorithms Covers spatial access methods including the R tree and several space driven structures and is filled with dozens of helpful illustrations *Design, Implementation, and Database Integration of a Data Model for Vague Spatial Data as a Foundation of the Next Generation of Spatial Databases and Geographical Information Systems* Alejandro Pauly,2007 We also provide the details of the mSLOB mechanism for handling multi structured large objects in databases The mechanism currently works as the generic interface between SPAL2D and any DBMS for which mSLOB can be implemented My dissertation offers a precise and conceptually clean foundation for implementing a DBMS extension for vague spatial data and demonstrates the embedding of these new data types as attribute data types in a database schema as well as the incorporation of vague spatial operations and predicates into queries formulated in an SQL like query language

Spatial Databases Shashi Shekhar,Sanjay Chawla,2003 This text aims to provide students with the basics in the applications and methods of spatial database management systems It balances theory cutting edge research and practice commercial trends **Design of Large High-dimensional Spatial Database Systems** ,2005 An Implementation of a

Spatial Database System Subramanian Sivaramakrishnan,1993 Spatial Data Types for Database Systems Markus Schneider,2014-03-12 Database research in the last decade has increasingly focused on providing support for non standard applications One important domain is representation and processing of spatial information needed e g in geographical information systems Spatial data types provide a fundamental abstraction for modeling the structure of geometric entities their relationships properties and operations This monograph is an extensive survey of this field and introduces a new general sophisticated framework for the formal definition and robust implementation of spatial data types Spatial

Database Design & Management M. C. Ellis, 1988 **A Formal Design for Three-Dimensional Spatial Data in Database Systems** Brian E. Weinrich, 2010-03 Previous work with spatial database systems has dealt mostly with two dimensions and more with implementation than with design issues This dissertation deals with the formal design of three dimensional spatial database systems and with the need for abstraction in the design Use of abstraction in the formal design of data models allows a database system developer to consider the comprehensive needs of users at an ideal level unencumbered by implementation details The dissertation also presents a set of robust three dimensional geometric primitives that could form the core of a discrete data model Although a discrete data model is more concrete than SPAL3D it has some abstraction The dissertation offers a precise and conceptually clean specification and foundation for implementing a Database Management System DBMS extension for three dimensional data Assuming the existence of an implementation of this type system it demonstrates the embedding of the spatial data types as attribute data types in database schemas as well as the incorporation of the operations and predicates into queries formulated in a possible extension of SQL The Design and Implementation of Two-dimensional Spatial Data Types and Their Integration Into a Relational Database Management System Pierre Akiki, 2007 The term spatial data signifies all geometric objects of different dimensions and the relations that could bind these objects together Spatial data is in general divided into two parts crisp spatial data and vague spatial data Crisp spatial data has determinate coordinates and boundaries whereas vague spatial data has indeterminate ones The demand for spatial data support in database management systems is growing every day yet not all commercial products provide spatial data support natively and those that do merely provide it partially Since database management systems are at the heart of most data oriented applications generic support for non traditional data types such as spatial data types is required from such systems The main goal of this thesis is to analyze spatial data in detail and to propose a method for storing and manipulating such data Both crisp and vague spatial data were analyzed and their usage and major aspects were highlighted We also studied existing support for spatial data in commercial database management systems and pointed out the existing lack of functionality in those systems We propose several ways of storing crisp spatial data based on some Open GIS Consortium OGC standards and on manipulating it by means of computational geometry We also propose ways to represent and manipulate vague spatial data These propositions were based on sampling techniques which are used in the field of GIS In order to prove our concepts we designed and implemented a spatial extension package SPEX and integrated it in a commercial relational database management system We also devised the necessary visual components and a software prototype to test our package We conclude our thesis by enforcing the idea of the common object store which is a DBMS capable of storing and manipulating all sorts of data relational data objects multimedia spatial etc **Review of Spatial-Database System Usability: Recommendations for the ADDNS Project** ,2007 Geospatial information systems GIS are a relatively new technology The key GIS technology strengths are its capabilities to store attributes of various spatial

features provide spatial analysis functionality and offer multiple perspective two dimensional 2D and three dimensional 3D visualizations This report presents an overview of the basic concepts of GIS and spatial databases provides an analytical usability evaluation and critically analyses different spatial database applications for different fields with special emphasis on defence related applications We provide a comprehensive spatial database evaluation methodology Basic and advanced functions for GIS operations are analysed with a focus on selected major GIS products and selected common database systems Optimal system requirement recommendations for spatial database design are provided with particular attention paid to the needs of the Advanced Deployable Day and Night Simulation ADDNS project This report provides a detailed overview of spatial database technologies to assist decision makers with selecting the best system for a particular task
