Spatial Databases A Tour:

Spatial Databases Shashi Shekhar, Sanjay Chawla, 2003 This text aims to provide students with the basics in the applications and methods of spatial database management systems It balances theory cutting edge research and practice commercial trends *Encyclopedia of Database Technologies and Applications* Rivero, Laura C., Doorn, Jorge Horacio, Ferragine, Viviana E., 2005-06-30 Addresses the evolution of database management technologies and applications along with the progress and endeavors of new research areas P xiii *Spatial Databases* Philippe Rigaux, Michel Scholl, Agnès Voisard, 2002 The authors explore and explain current techniques for handling the specialised data that describes geographical phenomena in a study that will be of great value to computer scientists and geographers working with spatial databases **Web and Wireless Geographical Information Systems** James D. Carswell, Stewart Fotheringham, Gavin McArdle, 2009-11-30 This book constitutes the refereed proceedings of the 9th International Symposium on Web and Wireless Geographical Information Systems W2GIS 2009 held in Maynooth Ireland in December 2009 The 12 revised full papers presented together with two invited talks were carefully reviewed and selected from numerous submissions The papers span a wide area including but not limited from geospatial analysis and personalization and semantic geo spatial web to W2GIS case studies and web and mobile applications and prototypes *Spatial Database Systems* Albert K.W. Yeung, G. Brent Hall, 2007-05-23 The decision to write this book was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook **Spatial Databases** Philippe Rigaux, 2002 *Handbook of e-Tourism* Zheng Xiang, Matthias Fuchs, Ulrike Gretzel, Wolfram Höpken, 2022-09-01 This handbook provides an authoritative and truly comprehensive overview both of the diverse applications of information and communication technologies ICTs within the travel and tourism industry and of e

tourism as a field of scientific inquiry that has grown and matured beyond recognition. Leading experts from around the world describe cutting edge ideas and developments, present key concepts and theories and discuss the full range of research methods. The coverage accordingly encompasses everything from big data and analytics to psychology, user behavior, online marketing, supply chain and operations management, smart business networks, policy and regulatory issues and much much more. The goal is to provide an outstanding reference that summarizes and synthesizes current knowledge and establishes the theoretical and methodological foundations for further study of the role of ICTs in travel and tourism. The handbook will meet the needs of researchers and students in various disciplines as well as industry professionals. As with all volumes in Springer's Major Reference Works program, readers will benefit from access to a continually updated online version.

GeoSpatial Semantics Frederico Fonseca, M. Andrea Rodriguez, Sergei Levashkin, 2007-11-17. This book constitutes the refereed proceedings of the Second International Conference on GeoSpatial Semantics GeoS 2007 held in Mexico City, Mexico, in November 2007. The papers are organized in topical sections on models and languages for geo ontologies, alignment and integration of geo ontologies, ontology based spatial information retrieval, formal representation for geospatial data and integration of semantics into spatial query processing. *Journal on Data Semantics XI* Jeff Z. Pan, Philippe Thiran, Terry Halpin, Steffen Staab, Vojtech Svatek, Pavel Shvaiko, John F. Roddick, 2008-12-05. Papers were invited based on their quality, relevance and significance and the ability of extending their results. Extended versions prepared by authors were subject to the traditional two round scholarly review process and the authors were required to respond to all concerns expressed by the reviewers before papers were accepted. Eight papers were eventually accepted for publication in this issue. The selection of SWESE best papers eventually resulted in the acceptance of two papers. The first paper, 'Experiences in the Design of Semantic Services Using Web Engineering Methods and Tools' by Brambilla, Ceri, Celino, Cerizza, Della Valle, Facca, Turati and Tzviskou, shows how classical software engineering methods such as formal business process development and automatic code generation combine with semantic methods and tools, i.e. ontology engineering, semantic service annotation and discovery to forge a new approach to software development for the Semantic Web. In the paper, the authors present their experience in the participation to the Semantic Web Service Challenge 2006 where the proposed approach achieved very good results in solving the proposed problems. The second paper, 'Automatically Generated Model Transformations Using Ontology Engineering Space' by Roser and Bauer, presents an approach to using the semantic technologies to improve cross organizational modeling by automated generation of model transformations. By automated generation of mappings, it offers new possibilities for the integration of domain specific languages and legacy models in a plug play manner, making it easier for new organizations to join collaborations. **Spatial Data Management** Nikos Mamoulis, 2022-06-01. Spatial database management deals with the storage, indexing and querying of data with spatial features such as location and geometric extent. Many applications require the efficient management of spatial data including Geographic Information Systems, Computer

Aided Design and Location Based Services The goal of this book is to provide the reader with an overview of spatial data management technology with an emphasis on indexing and search techniques It first introduces spatial data models and queries and discusses the main issues of extending a database system to support spatial data It presents indexing approaches for spatial data with a focus on the R tree Query evaluation and optimization techniques for the most popular spatial query types selections nearest neighbor search and spatial joins are portrayed for data in Euclidean spaces and spatial networks The book concludes by demonstrating the ample application of spatial data management technology on a wide range of related application domains management of spatio temporal data and high dimensional feature vectors multi criteria ranking data mining and OLAP privacy preserving data publishing and spatial keyword search Table of Contents Introduction Spatial Data Indexing Spatial Query Evaluation Spatial Networks Applications of Spatial Data Management Technology Advances in Spatial Databases Max J. Egenhofer, John R. Herring, 1995-07-19 This book presents the proceedings of the 4th International Symposium on large Spatial Databases SSD 95 held in Portland Maine USA in August 1995 The 23 refereed full papers presented were selected from more than 60 submissions and describe the state of the art in the expanding field of large spatial databases with a certain emphasis on an upcoming new generation of spatial database management systems The volume is organized in sections on spatial data models spatial data mining spatial query processing multiple representations open GIS geo algorithms reasoning about spatial relations spatial joins and benchmarks **Design and Implementation of Large Spatial Databases**, 1990 The most recent developments in spatial data management are reported in these proceedings SSD 89 brought together computer scientists and experts from application areas such as geography computer vision robotics computer aided manufacturing and environmental information systems This proceedings volume includes subjects such as extensible database systems spatial data structures an index structures spatial reasoning geographic information systems quadrees and thematic map modeling Publisher s website **Spatial Databases** Yannis Manolopoulos, Apostolos N. Papadopoulos, Michael Gr Vassilakopoulos, 2005-01-01 Introduces the reader to the world of spatial databases and related subtopics The broad range of topics includes spatial data modelling indexing of spatial and spatiotemporal objects data mining and knowledge discovery in spatial and spatiotemporal management issues and query processing for moving objects GIS for Environmental Applications Xuan Zhu, 2022-01-31 GIS for Environmental Applications provides a practical introduction to the principles methods techniques and tools in GIS for spatial data management analysis modelling and visualisation and their applications in environmental problem solving and decision making It covers the fundamental concepts principles and techniques in spatial data spatial data management spatial analysis and modelling spatial visualisation spatial interpolation spatial statistics and remote sensing data analysis as well as demonstrates the typical environmental applications of GIS including terrain analysis hydrological modelling land use analysis and modelling ecological modelling and ecosystem service valuation Case studies are used in the text to

contextualise these subjects in the real world examples and detailed tutorials are provided in each chapter to show how the GIS techniques and tools introduced in the chapter can be implemented using ESRI ArcGIS a popular GIS software system for environmental applications and other third party extensions to ArcGIS to address The emphasis is placed on how to apply or implement the concepts and techniques of GIS through illustrative examples with step by step instructions and numerous annotated screen shots The features include Over 350 figures and tables illustrating how to apply or implement the concepts and techniques of GIS Learning objectives along with the end of chapter review questions Authoritative references at the end of each chapter GIS data files for all examples as well as PowerPoint presentations for each chapter downloadable from the companion website GIS for Environmental Applications weaves theory and practice together assimilates the most current GIS knowledge and tools relevant to environmental research management and planning and provides step by step tutorials with practical applications This volume will be an indispensable resource for any students taking a module on GIS for the environment
