Woo, Wow, and Win Thomas A. Stewart, Patricia O'Connell, 2016-11-29 In this pioneering guide two business authorities introduce the new discipline of Service Design and reveal why trying new strategies for pleasing customers isn't enough to differentiate your business it needs to be designed for service from the ground up Woo Wow and Win reveals the importance of designing your company around service and offers clear practical strategies based on the idea that the design of services

is markedly different than manufacturing. Bestselling authors and business experts Thomas A Stewart and Patricia O Connell contend that most companies both digital and brick and mortar B2B or B2C are not designed for service to provide an experience that matches a customer's expectations with every interaction and serves the company's needs. When customers have more choices than ever before, study after study reveals that it's the experience that makes the difference. To provide great experiences that keep customers coming back, businesses must design their services with as much care as their products. Service Design is proactive; it is about delivering on your promise to customers in accordance with your strategy, not about acceding to customer dictates. *Woo Wow and Win* teaches you how to create Ahhh moments when the customer makes a positive judgment and to avoid Ow moments when you lose a sale or worse, customer trust. Whether you're giving a haircut, selling life insurance, or managing an office building, your customer is as much a part of your business as your employees are. Together, you and customers create a bank of trust fueled by knowledge of each other's skills and preferences. This is Customer Capital, the authors explain, and it is jointly owned. But it's up to you to manage it profitably. Innovative yet grounded in real world examples, *Woo Wow and Win* is the key strategy for winning customers and keeping them.

Marketing Gary M. Armstrong, Philip Kotler, 2007 How do we get you moving? By placing you the customer in the driver's seat. Marketing introduces the leading marketing thinking on how customer value is the driving force behind every marketing strategy. Fasten your seatbelt! System Error Rob Reich, Mehran Sahami, Jeremy M. Weinstein, 2024-04-16 *System Error* is a triumph: an analysis of the critical challenges facing our digital society that is as accessible as it is sophisticated. Anne Marie Slaughter, CEO of New America, A forward-thinking manifesto from three Stanford professors, experts who have worked at ground zero of the tech revolution for decades, which reveals how big tech's obsession with optimization and efficiency has sacrificed fundamental human values and outlines steps we can take to change course, renew our democracy, and save ourselves. In no more than the blink of an eye, a naive optimism about technology's liberating potential has given way to a dystopian obsession with biased algorithms, surveillance capitalism, and job-displacing robots. Yet too few of us see any alternative to accepting the onward march of technology. We have simply accepted a technological future designed for us by technologists, the venture capitalists who fund them, and the politicians who give them free rein. It doesn't need to be this way. *System Error* exposes the root of our current predicament: how big tech's relentless focus on optimization is driving a future that reinforces discrimination, erodes privacy, displaces workers, and pollutes the information we get. This optimization mindset substitutes what companies care about for the values that we as a democratic society might choose to prioritize. Well-intentioned optimizers fail to measure all that is meaningful and when their creative disruptions achieve great scale, they impose their values upon the rest of us. Armed with an understanding of how technologists think and exercise their power, three Stanford professors, a philosopher working at the intersection of tech and ethics, a political scientist who served under Obama, and the director of the undergraduate Computer Science program at

Stanford also an early Google engineer reveal how we can hold that power to account Troubled by the values that permeate the university s student body and its culture they worked together to chart a new path forward creating a popular course to transform how tomorrow s technologists approach their profession Now as the dominance of big tech becomes an explosive societal conundrum they share their provocative insights and concrete solutions to help everyone understand what is happening what is at stake and what we can do to control technology instead of letting it control us
