Southern Zombies 3 Ann Riley, 2015-12-06 The world we live in now is one where you have to fight or die There are no exceptions If it isn't zombies trying to make a snack out of you there are people who try to take what you have because they are lazy The world may never be the same again I'm thinking it won't How could it be We have lost 75% or more of the human population Since there are no communications that number doesn't even include the whole world No one knows how it is in other countries We have always said the government was incompetent well they finally proved it with the zombie outbreak

Southern Zombies Five Book Set Ann Riley, 2016-01-02 Southern Zombies Five Book Box Set Featuring A Story of Survival Southern Hospitality Southern Blood Southern Revenge and South of Hell The world we live in now is one where you have to fight or die There are no exceptions Sometimes fighting against the people who want to take what you have is harder than dealing with the walkers The world may never be the same again I'm thinking it won't How could it be We have lost 75% or more of the human population Since there are no communications that number doesn't even include the whole world No one knows how it is in other countries We have always said the government was incompetent well they finally proved it with the zombie outbreak

Southern Zombies Ann Riley, 2015-11-22 Toxoplasmosis is caused by the protozoan parasite *Toxoplasma gondii* In the United States it is estimated that 22.5% of the population 12 years and older have been infected with *Toxoplasma* In various places throughout the world it has been shown that up to 95% of some populations have been infected with *Toxoplasma* Infection is often highest in areas of the world that have hot humid climates and lower altitudes Toxoplasmosis occurs from eating improperly cooked lamb mutton pork goat or beef or from drinking unpasteurized milk contaminated with *Toxoplasma gondii* *Toxoplasma gondii* can also be transmitted by handling contaminated animals raw meat or having contact with food such as raw or undercooked pork or beef water or dirt Direct contamination is possible through open wounds If people do not wash their hands after contact with contaminated material or before eating or drinking the organism is transferred from the hands to the mouth and is then swallowed *Toxoplasma gondii* has been found in the kidneys bladder and intestine of infected humans Infection from blood transfusions and organ transplants from infected donors is rare but it has been reported In the human host the parasites form tissue cysts most commonly in skeletal muscle myocardium brain and eyes These cysts may remain throughout the life of the host Diagnosis is usually achieved by serology although tissue cysts may be observed in stained biopsy specimens Two or three weeks after the first infection the *Toxoplasma* microorganism divides more slowly and a protective membrane forms around the parasite cells The tissue cysts are formed primarily in brain eye heart muscle and skeletal muscle Bradyzoites persist in tissues for many years possibly for the life of the host Some short term effects of toxoplasmosis may include fever muscle pain sore throat headache swollen lymph nodes and an enlarged spleen Unless tests are carried out to confirm a *Toxoplasma* infection these symptoms can be taken for flu The long term or chronic effects of the infection result when the cysts spread to the brain and muscle cells The

cysts which can stay in the body as long as the person lives can rupture and cause severe illness Another form of the disease can also affect the eyes leading to partial loss of sight or to blindness in one or both eyes hence the milky white color the infected ones display Although toxoplasmosis can affect any organ in the body the lymph nodes skeletal and heart muscles and the brain are most commonly involved Our outbreak started with a recall of beef and pork suspected of being contaminated with the toxoplasmosis parasite This toxoplasmosis epidemic hit around the same time as the flu vaccine season got started Although live vaccines don't cause disease in the people who get them because they are made with weakened viruses and bacteria there is always a concern that someone with a severely weakened immune system could get sick after getting a live vaccine That is why live vaccines are not given to people who have a weakened immune system People who were infected with the toxoplasmosis parasite displayed symptoms of the influenza virus So almost everyone thought we had a flu epidemic going around People getting the flu vaccine already had a weakened immune system thus pushing them further into sickness with the live flu vaccine This somehow sent the toxoplasmosis parasite into overdrive and caused it to wreak havoc
