Spasticity Management A Practical Multidisciplinary Guide Second Edition:

Spasticity Management Valerie L. Stevenson, Louise Jarrett, 2016-04-27 Spasticity is a common symptom that arises in a wide range of neurological conditions. Unfortunately a poor understanding and inadequate management of spasticity often results in it having a greater impact on patients than necessary. Using a multidisciplinary approach *Spasticity Management A Practical Multidisciplinary Guide* provides the essential

Neuropsychopharmacology Jahangir Moini, Anthony

LoGalbo, Jennifer G. Schnellmann, 2023-05-10 *Neuropsychopharmacology* reviews the principles of pharmacology with a focus on the central nervous system and autonomic nervous system. Beyond autonomic and central nervous system pharmacology this volume uniquely discusses psychiatric disorders and the pharmacological interventions that are available for conditions including depression, schizophrenia, and anxiety disorders. With a focus on these specific body systems readers will see end of chapter questions that offer real world case studies as well as multiple choice questions for further learning. Beneficial features and content also include two extensive examination tests which each contain 100 questions for better learning or to be used in teaching and a glossary. Helpful appendices cover high alert medications and toxicology effects on the nervous system. Each chapter will contain classifications of medications, pharmacokinetics, mechanism of action, clinical indications, and toxicities. Describes pharmacology principles pertaining to the central and autonomic nervous system. Identifies pharmacological interventions for psychiatric disorders including current evidence based interventions for depression, schizophrenia, and anxiety disorders. Features chapter outlines, end of chapter questions, real world case studies, and examinations for deeper learning or teaching.

Spasticity Management Valerie Stevenson, Louise Jarrett, 2006-07-26

Spasticity is a common symptom seen in many neurological conditions notably head injury, spinal cord injury, stroke, cerebral palsy and multiple sclerosis. It is also the dominant feature in a number of rarer conditions such as tropical and hereditary spastic paraparesis (HSP). The fact that it is relevant to many chronic neurological conditions and that the absence of multidisciplinary input can result in progressive disability ensures spasticity management is a prominent feature in the current National Service Framework (NSF) for long term neurological conditions. In the future more long term care for such patients will be done in primary care and the community. It is therefore essential that a multidisciplinary approach is used with successful liaison between secondary, primary and social care. Optimum management of spasticity is dependent on an understanding of its underlying physiology, an awareness of its natural history, an appreciation of the impact on the patient and a comprehensive approach to minimising that impact which is both multidisciplinary and consistent over time. Regrettably these essential requirements are rarely met and consequently inadequately managed spasticity results in a range of painful and disabling sequelae which with the right approach are for the most part preventable. Although there are several excellent publications looking at this area none are a truly practical guide relevant to all members of the multidisciplinary team involved in spasticity management. Anyone who has been involved in setting up a new service knows how difficult and

how protracted a process this can be and if it has been done before why reinvent it The basis of this manual is to collect together the experience and knowledge of such a team who have worked in this area for 10 years now It pulls together all areas including how to set up and develop a service as well as useful management strategies On a practical note it includes complete copies of all of our patient information assessment proformas protocols for different interventions nursing care plans and an integrated care pathway for outpatient spasticity management both as hard copy but also on CD ROM to aid in reproduction These protocols are of course specific to our team but could easily be adapted for use in other centres We are not saying this is the right or only way to run a spasticity service and there is certainly room for improvement but we hope by sharing our experience we can help others to develop their own service thus improving management for all individuals with spasticity
