Spatial Behavior A Geographic Perspective:

Spatial Behavior Reginald G. Golledge, 1997-01-01 How do human beings negotiate the spaces in which they live work and play How are firms and institutions and their spatial behaviors being affected by processes of economic and societal change What decisions do they make about their natural and built environment and how are these decisions acted out Updating and expanding concepts of decision making and choice behavior on different geographic scales this major revision of the authors acclaimed Analytical Behavioral Geography presents theoretical foundations extensive case studies and empirical evidence of human behavior in a comprehensive range of physical social and economic settings Generously illustrated with maps diagrams and tables the volume also covers issues of gender discusses traditionally excluded groups such as the physically and mentally challenged and addresses the pressing needs of our growing elderly population

Spatial Behaviour: a Geographic Perspective Reginald Golledge, 1997 **Assessment in Geographical Education: An International Perspective** Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27 In recent years there has been increased attention paid to the importance of assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be

valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills

Handbook of Behavioral and Cognitive Geography Daniel R. Montello, 2018-04-27 This comprehensive Handbook summarizes existing work and presents new concepts and empirical results from leading scholars in the multidisciplinary field of behavioral and cognitive geography the study of the human mind and activity in and concerning space place and environment It provides the broadest and most inclusive coverage of the field so far including work relevant to human geography cartography and geographic information science

Person-environment-behavior Research Douglas Amedeo, Reginald G. Golledge, Robert John Stimson, 2009-01-01 Research into spatial influences on people s everyday activities and experiences presents many conceptual and methodological complexities Written by leading authorities this book provides a comprehensive framework for collecting and analyzing reliable person environment behavior data in real world settings that rarely resemble the controlled conditions described in typical texts An array of research designs are illustrated in chapter length examples addressing such compelling issues as spatial patterns of voting behavior ways in which disabilities affect people s travel and wayfinding how natural and built environments evoke emotional responses spatial factors in elementary teaching and learning and more A special chapter guides the student or beginning researcher to craft a successful research proposal

Wayfinding Behavior Reginald G. Golledge, 1999-01-14 The metaphor of a cognitive map has attracted wide interest since it was first proposed in the late 1940s Researchers from fields as diverse as psychology geography and urban planning have explored how humans process and use spatial information often with the view of explaining why people make wayfinding errors or what makes one person a better navigator than another Cognitive psychologists have broken navigation down into its component steps and shown it to be an interplay of neurocognitive

functions such as spatial updating and reference frames or perception action couplings. But there has also been an intense debate among biologists over whether animals have cognitive maps or have other forms of internal spatial representations that allow them to behave as if they did. Yet until now little has been done to relate research on human and non human subjects in this area. In *Wayfinding Behavior Cognitive Mapping and Other Spatial Processes* Reginald Golledge brings together a distinguished group of scholars to offer a unique and comprehensive survey of current research in these diverse fields. Among the common themes they discover is the psychologists' black box approach in which the internal mechanisms of spatial perception and route planning are modeled or constructed like metaphors based on the behavioral evidence. Cognitive neuroscientists on the other hand have attempted to discover the neurocognitive basis for spatial behavior. They have shown for example that damage in the hippocampus system invariably impairs the ability of animals and humans to learn about, remember and navigate through environments and studies in humans show that neurons in this system code for location, direction and distance thereby providing the elements needed for a mapping system. Artificial intelligence and robotics theorists attempt to construct intelligent mapping systems using computer technology. In these areas there is growing evidence that as in human wayfinding processes useful representations cannot be achieved without sacrificing completeness and precision. *Wayfinding Behavior Cognitive Mapping and Other Spatial Processes* offers not only state of the art knowledge about wayfinding but also represents a point of departure for future interdisciplinary studies. The more we know concludes volume editor Reginald Golledge about how humans or other species can navigate, wayfind, sense, record and use spatial information the more effective will be the building of future guidance systems and the more natural it will be for human beings to understand and control those systems. *Geospatial Technologies and Homeland Security* Daniel Sui, 2008-05-25

Homeland security and context. In the *Geographical Dimensions of Terrorism* GDOT Cutter et al 2003 the first book after 9/11 to address homeland security and geography we developed several thematic research agendas and explored intersections between geographic research and the importance of context both geographical and political in relationship to the concepts of terrorism and security. It is good to see that a great deal of new thought and research continues to flow from that initial research agenda as illustrated by many of the papers of this new book entitled *Geospatial Technologies and Homeland Security Research Frontiers and Future Challenges*. Context is relevant not only to understanding homeland security issues broadly but also to the conduct of research on geospatial technologies. It is impossible to understand the implications of a homeland security strategy let alone hope to make predictions, conduct meaningful modeling and research or assess the value and dangers of geospatial technologies without consideration of overarching political, social, economic and geographic contexts within which these questions are posed. **International Encyclopedia of Human Geography**, 2009-07-16

The *International Encyclopedia of Human Geography* provides an authoritative and comprehensive source of information on the discipline of human geography and its constituent and related subject areas. The encyclopedia includes over 1 000 detailed

entries on philosophy and theory key concepts methods and practices biographies of notable geographers and geographical thought and praxis in different parts of the world This groundbreaking project covers every field of human geography and the discipline s relationships to other disciplines and is global in scope involving an international set of contributors Given its broad inclusive scope and unique online accessibility it is anticipated that the International Encyclopedia of Human Geography will become the major reference work for the discipline over the coming decades The Encyclopedia will be available in both limited edition print and online via ScienceDirect featuring extensive browsing searching and internal cross referencing between articles in the work plus dynamic linking to journal articles and abstract databases making navigation flexible and easy For more information pricing options and availability visit http://info.sciencedirect.com/content/books_ref_works coming Available online on ScienceDirect and in limited edition print format Broad interdisciplinary coverage across human geography Philosophy Methods People Social Cultural Political Economic Development Health Cartography Urban Historical Regional Comprehensive and unique the first of its kind in human geography Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers current research in their specialty areas and tracks trends and innovations in the many subfields of geography As such it is both a state of the discipline assessment and a topical reference It includes an introduction by the editors and 47 chapters each on a specific specialty The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers While it focuses on work since 1990 it additionally includes related prior work and work by non American geographers The initial Geography in America was published in 1989 and has become a benchmark reference of American geographical research during the 1980s This latest volume is completely new and features a preface written by the eminent geographer Gilbert White **Women and Spatial Change** Arlene C. Rengert, Janice J. Monk, 1982 **Geographic Perspectives in Migration Research** David Gordon Bennett, Ole Gade, 1979 **RESIDENTIAL BURGLARY** George F. Rengert, 2015-11-01 This updated and expanded new edition continues its unique approach and engrossing exploration of the elements of residential burglary Presented in five parts the first is concerned with what is on a burglar s mind when he or she considers whether to commit a burglary and which house to choose The second part is concerned with time and the opportunities and limits it places on both burglar and victim while the third section probes how burglaries are fit into space and the importance of perception of space in the burglary process The fourth section describes how burglars select a home to burglarize and uses Greenwich Connecticut as a model to contrast target and nontarget homes The fifth part reviews some of the nuts and bolts techniques and reasons for their use as described by burglars and addresses elements about housing architecture the burglary process and offers suggestions for controlling the problem of burglary It concludes with a discussion of changes in our lifestyles and

communities and how these changes will play out in future patterns of residential burglary The authors draw on in depth interviews with admitted burglars and the inclusion of the ideas and actual words of the burglars brings the material to life The text continues to offer the most unique overview of residential burglary It combines ethnographic research with study of official records and combines the strengths of both approaches Methods and Techniques in Human Geography Guy M.
