Spatial Diversity Dynamics Resources Development:

Spatial Diversity and Dynamics in Resources and Urban Development Ashok K. Dutt, Allen G. Noble, Frank J. Costa, Rajiv R. Thakur, Sudhir K. Thakur, 2015-11-24 This double volume work focuses on socio demographics and the use of such data to support strategic resource management and planning initiatives. Papers go beyond explanations of methods, technique and traditional applications to explore new intersections in the dynamic relationship between the utilization and management of resources and urban development. International authors explore numerous experiences, characteristics of development and decision making influences from across Asia and Southeast Asia as well as recounting examples from America and Africa. Papers propound techniques and methods used in geographical research such as support vector machines, socio economic correlates and travel behaviour analysis. In this volume the contributors examine cutting edge theories explaining diversity and dynamics in urban development. Topics covered include human vulnerability to hazards, space and urban problematic assessment and evaluation of regional urban systems and structures and urban transformations as a result of structural change, economic development and underdevelopment. The significance of these topics lie in the pace and volume of change as is happening in geography, reflecting continued development within established fields of inquiry and the introduction of significantly new approaches during the last decade. Readers are invited to consider the dynamics of spatial expansion of urban areas and economic development and to explore conceptual discussion of the innovations in and challenges on urbanization processes, urban spaces themselves and both resource management and environmental management. Together the two volumes contribute to the interdisciplinary literature on regional resources and urban development by collating recent research with geography at its core. Scholars of urban geography, human geography, urbanism and sustainable development will be particularly interested in this book.

Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 1 Ganesh Shivakoti, Ujjwal Pradhan, Helmi Helmi, 2016-09-01 Redefining Diversity and Dynamics of Natural Resources Management in Asia Volumes 1-4 brings together scientific research and policy issues across various topographical areas in Asia to provide a comprehensive overview of the issues facing the region. Sustainable Natural Resources Management in Dynamic Southeast Asia Volume 1 pulls together regional experts in the field to look specifically at sustainability issues across the region to see what has been implemented, what the impacts have been and what other options are available. In the race to be a developed region, many Southeast Asian countries have foregone natural resources through haphazard use. As a result, the people are faced with numerous environmental challenges, particularly deforestation and forest degradation, biodiversity loss and ecosystem degradation, reduction in soil quality and decreases in the quantity of available water. Community based forest management is the involvement of local communities in the protection, conservation and management of public forests to prevent degradation through sustainable practices while still responding to the basic social and economic needs of local populations. When the people who depend on forest resources for their livelihoods are jointly

responsible for managing and protecting them they tend to do so in a more sustainable manner by focusing on the long term benefits rather than the immediate short term gains However when tenure rights are weak unclear or insecure or offer limited benefits people are incited in extracting more immediate benefits resulting in suboptimal forest management and the reduction of carbon stocks Features case studies that cover issues such as rising levels of deforestation forest degradation regional food security ecosystem degradation biodiversity loss conflicts over natural resource use water management issues and impacts on local communities Includes contributions from local researchers who are dealing with these issues first hand and on a daily basis Includes a comparative review on REDD implementation in different communities Focuses on sustainability issues across the region Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 3 Ganesh Shivakoti, Tran Nam Thang, Ngo Tri Dung, David Hulse, Shubhechha Sharma, 2016-09-13 Redefining Diversity and Dynamics of Natural Resources Management in Southeast Asia Volumes 1 4 brings together scientific research and policy issues across various topographical areas in Asia to provide a comprehensive overview of the issues facing this region Natural Resource Dynamics and Social Ecological Systems in Central Vietnam Development Resource Changes and Conservation Issues Volume 3 focuses on the issues specific to Central Vietnam that are also found globally War had significantly impacted both land and water resources from which it had to recover environmentally Additionally this is an area with growing urbanization pressures and industrial development both of which are known for stretching resources beyond their limits The introduction of several hydro electric power projects have even further eroded the local agricultural and forest ecosystems This volume looks at Central Vietnam holistically from management and use to policy and data driven solutions Provides land management practitioners and policy makers with the tools to deal with natural resource issues in a developing nation Reviews the impacts of the first PES Payment for Ecosystem Services policies upon which were based similar programs in Latin America Reviews the current and potential future land management of Central Vietnam giving an eye to solutions for any nation impacted by war trying to balance development with conservation efforts and provide their populations with sustainable economic futures Examines Central Vietnam holistically from management and use to policy and data driven solutions Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 4 Ganesh Shivakoti, Rudi Febriamansyah, Yonariza Yonariza, Raza Ullah, 2016-10-11 Redefining Diversity and Dynamics of Natural Resources Management in Southeast Asia Volumes 1 4 brings together scientific research and policy issues across various topographical area in Asia to provide a comprehensive overview of the issues facing the region The Reciprocal Relationship between Governance of Natural Resources and Socio Ecological Systems Dynamics in West Sumatra Indonesia Volume 4 covers a diverse range of issues related to natural resources and its management in West Sumatra Indonesia The chapters cover issues with livelihood dependence rights and access to natural resources natural resources management practices socio ecological systems and governance Shared experiences and lessons learned from the case studies examined serve as a

basis for policy makers and environmental practitioners to recognize the potential of West Sumatra's natural resources for ecological social and economic development food security poverty alleviation and natural resource sustainability Features contributions from mostly local authors Explores an area experiencing considerable environmental challenges including impacts on biodiversity and local economies Includes chapters on forests and illegal logging land resources water resources protected lands and biodiversity Examines case studies as a basis for policy makers and environmental practitioners to recognize the potential of West Sumatra's natural resources for ecological social and economic development food security poverty alleviation and natural resource sustainability

A New Century for Natural Resources Management Richard L. Knight, Sarah F. Bates, 1995-03 This book explores the changes that are leading to a new century of natural resources management It places the current situation in historical perspective analyzes the forces that are propelling change and describes and examines the specific changes in goals policy and practice that are transforming all aspects of natural resources management The book is an important overview for wildlife biologists foresters and others working for public land agencies professors and students of natural resources and all those whose livelihood depends on the use of public natural resources
