VESPAR Dawn W. Langdon, Elizabeth K. Warrington, 1995 VESPAR is a test of reasoning designed to measure fluid intelligence in neurological patients with more accuracy than has hitherto been possible It comprises six sections three matched sets of verbal and spatial reasoning problems each dedicated to one of three forms of inductive reasoning odd one out by analogy and series completion The VESPAR overcomes the constraints of classical tests of reasoning by using simple stimuli that are more readily accessed by patients who have suffered physical or cognitive impairments as a result of neurological illness It does so by not timing performance by using high frequency stimulus words and by using visually distinct spatial stimuli A multiple choice format has been adopted to reduce both short term memory load and output demands on the patient The reasoning items are all novel thus the contribution of stored knowledge and procedures are

reduced to a minimum The assessment of patients for neurodiagnostic and neurorehabilitation needs will be facilitated Patients with motor disabilities or speech production impairments will be less handicapped than on other tests by the VESPAR's requirement for simple pointing response A measure of fluid intelligence can be obtained in patients with aphasia on the spatial section of the test and in patients with visual and spatial problems on the verbal section The VESPAR's low reliance on learnt knowledge makes it a good indicator of innate ability relatively unaffected by educational experience Thus although originally developed for adult neurological populations the test is suitable for a wide range of clinical educational occupational and research applications [The Future We Want](#) Dexter P. Spatial Reasoning in the Early Years

Brent Davis,Spatial Reasoning Study Group,2015-04-17 Over the past several years spatial reasoning has gained renewed prominence among mathematics educators as spatial skills are proving to be not just essential to mathematical understanding but also strong predictors of future success beyond the classroom in fields such as science technology and engineering By exploring both primary and emergent dimensions Spatial Reasoning in the Early Years helps define the

concept of spatial reasoning and provides compelling evidence of the need for a clear focus within early education specifically. The authors review the research look across current theories and investigate implications for contemporary school mathematics pedagogy as they identify areas of inquiry necessary to bring a stronger spatial reasoning emphasis into the classroom. The book contains many classroom or workshop based vignettes highlighting the complexity of spatial reasoning in educational practice providing an in depth analysis of spatial reasoning as it applies to classroom practice and offering new ways of framing lessons to help young students hone their spatial reasoning abilities. The book concludes with a forward looking agenda that contributes to developing a greater understanding of the role spatial reasoning plays in educational contexts and beyond. Supported by plentiful visual representations Spatial Reasoning in the Early Years skillfully integrates the conceptual and the concrete making this text a dynamic and accessible resource
