## **Supply Chain Forecasting Software:**

**Supply Chain Forecasting Software** Shaun Snapp, 2012-08 This book explains the important aspects of supply chain forecasting. The book is designed to allow the reader to get more out of their current forecasting system as well as explain some of the best functionality in forecasting which may not be resident in the reader's current system but how they can be accessed at low cost. The book breaks down what is often taught as a complex subject into simple terms and provides information that can be immediately put to use by practitioners. One of the only books to have a variety of supply chain forecasting vendors showcased. The book also provides the reader with a look into the leading edge of forecasting. Several concepts that are covered while currently available in forecasting software have yet to be widely implemented or even written about. The book moves smoothly between concepts to screen shots and descriptions of how the screens are configured and used. This provides the reader with some of the most intriguing areas of functionality within a variety of applications. *Data Science for Supply Chain Forecasting* Nicolas Vandeput, 2021-03-22 Using data science in order to solve a problem requires a scientific mindset more than coding skills. *Data Science for Supply Chain Forecasting* Second Edition contends that a true scientific method which includes experimentation, observation, and constant questioning must be applied to supply chains to achieve excellence in demand forecasting. This second edition adds more than 45 percent extra content with four new chapters including an introduction to neural networks and the forecast value added framework. Part I focuses on statistical traditional models. Part II on machine learning and the all new Part III discusses demand forecasting process management. The various chapters focus on both forecast models and new concepts such as metrics, underfitting, overfitting, outliers, feature optimization, and external demand drivers. The book is replete with do it yourself sections with implementations provided in Python and Excel for the statistical models to show the readers how to apply these models themselves. This hands-on book covering the entire range of forecasting from the basics all the way to leading edge models will benefit supply chain practitioners, forecasters, and analysts looking to go the extra mile with demand forecasting. Events around the book. Link to a De Gruyter Online Event in which the author Nicolas Vandeput together with Stefan de Kok, supply chain innovator and CEO of Wahupa, Spyros Makridakis, professor at the University of Nicosia and director of the Institute For the Future (IFF), and Edouard Thieuleux, founder of AbcSupplyChain, discuss the general issues and challenges of demand forecasting and provide insights into best practices, process models, and discussing how data science and machine learning impact those forecasts. The event will be moderated by Michael Gilliland, marketing manager for SAS forecasting software. <https://youtu.be/1rXjXcabW2s>
