Dr. Ashad ullah Qureshi,2022-06-01 Companies offering services on the Internet have led corporations to shift from the high cost of owning and maintaining stand alone privately owned and operated infrastructure to a shared infrastructure model These shared infrastructures are being offered by infrastructure service providers which have subscription or pay on demand charge models presenting compute and storage resources as a generalized utility Utility based infrastructures that are run by service providers have been defined as cloud computing by the National Institute of Standards and Technology In the cloud computing model the concerns of security and privacy protections are exacerbated due to the requirement for an enterprise to allow third parties to own and manage the infrastructure and be custodians of the enterprises information With this new architectural model there are new hybrid governance models designed to support complex and uncertain environments   **Blockchain Security in Cloud Computing** K.M.
