Phyconomy encompasses the science and arts of both wild harvesting and cultivation of seaweeds Some of these practices are as ancient as the very earliest uses of selected seaweeds going back millennia Other phyconomic practices are some of the most recent developments applied to the selection breeding and multiplication of strains of resilient and productive cultivated species specifically selected for the ever changing marine environment in which they need to succeed Phyconometrics involves measurement of stocks impacts of harvesting as well as production in the sea and on land providing data on volumes and values of commercial species some at very large industrial scales In so much as tropical phyconomy has been covered with particular attention to eucheumatoids by the editorial team in other volumes of the DAPH book series we realised there was also a large world of temperate activities covering micro and macroalgal species which had not previously been collated and presented to the applied phycological phyconomic community That has now been rectified The co editorial team of Anicia Q Hurtado Iain C Neish and Alan T Critchley were grateful to receive the additional assistance of Leonel

Pereira and the project Temperate Phyconomy began It soon became evident there was such a wealth of novel information that could be provided from temperate waters around the phyconomic world and indeed so much so that the title expanded to Advances in Temperate Phyconomy Algal Harvest and Cultivation in Globally Distributed Temperate Waters Part I looks at specific topics of phyconomy including wild vs cultivated seaweed species It dispels some of the myths around get the get rich quick seaweed production schemes it presents some stark facts based in reality on applied phycology and what it takes to obtain quality seaweed biomass for many value added applications New developments in phyconomic practices harvest cultivation methods and materials including strain selection and seed bank maintenance are detailed with a specific focus on temperate regions of the world Part II will follow with another set of exciting developments on temperate phyconomy from around the world of temperate seaweeds of economic value The book is aimed at all students researchers operators and practitioners in the sphere of applied phycology and phyconomy i e both the macro and microalgal worlds where there is much in common if you look with eyes wide open The book is a great way to read the specifics and also be able to browse relevant areas presented by global leading teams in their various phyconomic fields it is full of information which might not pop up in an online search In essence anyone working with algae commercially would gain benefits from reading and inwardly digesting the book s contents from start to finish **Chemical News and Journal of Physical Science** ,1896
