Directions: Read both sections below. Compare and contrast the two animals.

DOLPHINS	SHARKS
<p>A dolphin is a warm-blooded mammal that lives in the ocean. Dolphins give birth to babies that are called calves. They also breath oxygen. A dolphin must live near the surface where it can breathe air. Dolphins are known to be vocal and social animals. They swim in pods where they come together with their mates to travel. Dolphins have a dorsal fin on their back, two fins on their side, and a tail. They also have a blowhole on top of their body. Their tail is horizontal and is used to swim in an up-and-down motion. A dolphin will eat things like fish, crustaceans, squid and shrimp.</p>	<p>Sharks are cold-blooded fish that live in the ocean. They spend their whole lives deep underwater. Like other fish, sharks have gills to remove oxygen from the environment. Sharks prefer to live and hunt alone. They do not like to socialize with other sharks. Sharks have a dorsal fin on their back, two fins on their side, and a tail. They also have gills on the side of their body. Their tail is vertical and is used to swim in a side-to-side motion. A shark will eat things like fish, crustaceans, squid, shrimp, other sharks, marine mammals, and plankton.</p>

A practical and understandable approach to nonparametric statistics for researchers across diverse areas of study As the importance of nonparametric methods in modern statistics continues to grow these techniques are being increasingly applied to experimental designs across various fields of study However researchers are not always properly equipped with the knowledge to correctly apply these methods Nonparametric Statistics for Non Statisticians A Step by Step Approach fills a void in the current literature by addressing nonparametric statistics in a manner that is easily accessible for readers with a background in the social behavioral biological and physical sciences Each chapter follows the same comprehensive format beginning with a general introduction to the particular topic and a list of main learning objectives A nonparametric procedure is then presented and accompanied by context based examples that are outlined in a step by step fashion Next SPSS screen captures are used to demonstrate how to perform and recognize the steps in the various procedures Finally the authors identify and briefly describe actual examples of corresponding nonparametric tests from diverse fields Using this organized structure the book outlines essential skills for the application of nonparametric statistical methods including how to Test data for normality and randomness Use the Wilcoxon signed rank test to compare two related samples Apply the

Mann Whitney U test to compare two unrelated samples Compare more than two related samples using the Friedman test Employ the Kruskal Wallis H test to compare more than two unrelated samples Compare variables of ordinal or dichotomous scales Test for nominal scale data A detailed appendix provides guidance on inputting and analyzing the presented data using SPSS and supplemental tables of critical values are provided In addition the book's FTP site houses supplemental data sets and solutions for further practice Extensively classroom tested Nonparametric Statistics for Non Statisticians is an ideal book for courses on nonparametric statistics at the upper undergraduate and graduate levels It is also an excellent reference for professionals and researchers in the social behavioral and health sciences who seek a review of nonparametric methods and relevant applications
