New Trends in Astronomy Teaching L. Gouguenheim, D. McNally, J. R. Percy, 1998-10 How do students learn astronomy How can the World Wide Web be used to teach And how do planetariums help with educating the public These are just some of the timely questions addressed in this stimulating review of new trends in the teaching of astronomy Based on an international meeting hosted by the University of London and the Open University IAU Colloquium 162 this volume presents articles by experts from around the world The proceedings of the first IAU Colloquium 105 The Teaching of Astronomy edited by Percy and Pasachoff were first published in 1990 and soon became established as the definitive resource for astronomy teachers Astronomy education has advanced enormously in the intervening 7 years and this sequel will inspire and encourage teachers of astronomy at all levels and provide them with wealth of ideas and experience on which to build

The Cambridge N-Body Lectures Sverre Aarseth, Christopher Tout, Rosemary Mardling, 2008-09-02 Published under the auspices of the Royal Astronomical Society this volume contains a set of extensive school tested lectures with the aim to give a coherent and thorough background knowledge of the subject and to introduce the latest developments in N body computational astrophysics The topics cover a wide range from the classical few body problem with discussions of resonance chaos and stability to realistic modelling of star clusters as well as descriptions of codes algorithms and special hardware for N body simulations This collection of topics related to the gravitational N body problem will prove useful to both students and researchers in years to come 1 Published under the auspices of the Royal Astronomical Society

Starbursts Triggers, Nature, and Evolution Bruno Guiderdoni, 2013-11-11 Starbursts are regions of unusually rapid star formation often located in the central parts of galaxies They differ from more normal regions of star formation in terms of the throughput of mass and the rapidity with which the gas is consumed In the last twenty years extensive observational data at most wavelengths have become available on starbursts but many important issues remain to be addressed observationally as well as theoretically How are strong episodes of star formation triggered What is the quantity of gas converted into stars during bursts What is the initial mass function of stars in these events How does the feedback from stars influence the interstellar medium and self regulate star formation What is the subsequent chemical and photometric evolution How do starbursts rule the formation and evolution of galaxies In recent years many observational data at different wavelengths optical radio infrared X ray have become available However these observations are still fragmentary in the sense that different classes of objects have been

observed in different ways and the coverage is not consistently deep or complete As a consequence an overall observational picture of starburst galaxies is missing and theoretical understanding and modelling have remained highly tentative The purpose of the school Starbursts Triggers Nature and Evolution was to gather theorists and observers with complementary approaches to the starburst phenomenon in order to summarize the state of the art of the observations and models emphasizing the consistency of the various viewpoints
