Introduction

The document gives an approach to troubleshoot basic Weblogic-IIS setup, Weblogic running on Windows. The document has been written keeping in mind a simple setup containing one admin and 2-3 managed servers. The error messages and possible solutions have been generalized as much as possible, but it's still possible that they do not hold good for an odd scenario.

S No.	Issue	Error message	Possible Meaning	Resolution
1.	WL admin console not reachable.	ISAPI Plug-in error	Admin server not running.	Check admin server's log file and restart it.
2.	Managed server not coming up	... NodeManagerException... Ensure that the NodeManager on host 'localhost' is configured to listen on port '5555' and that it is actively listening ...	The admin server is unable to contact managed server through node manager (NM).	Check whether node manager is properly configured properly to run on the same machine and port number as in this error message.
3.	Managed server not coming up	The status is Failed_NOT_Restartable	There should be some problem with the Node Manager.	Restart NM and try starting the server again.
4.	Managed server not coming up	The status is Failed_Restarting	There should be some problem with the Node Manager.	Restart NM and try again.
5.	Managed server not coming up	...Trying to start in independent mode...Config-mml.xml file missing...Failed starting...	Managed server is not able to see the admin server running.	Restart Node Manager and try. If possible, restart admin server and try once more. If it still doesn't work, look for errors in admin server's log file.
6.	Application URL not working	The page cannot be displayed	The application may not be reaching WL servers at all.	Check the status of WL servers. If ok, check status of IIS servers. You may want to check IIS logs for details about the failing request as to where exactly is it failing.
7.	Application URL not working	Oblix Netpoint Operation Error	Oblix License issue	Check in case Oblix license has expired.
