Economic rationale for visual configuration of space for rent and tenaning decision in shopping malls Sumanta Deb,Keya Mitra,2016-12-21 Research Paper postgraduate from the year 2016 in the subject Art Architecture History of Construction grade 2 5 Indian Institute of Engineering Science and Technology Shibpur Indian Institute of Engineering Science and Technology language English abstract Organized retail formats are growing twice as fast as their traditional counterparts But in spite of that the mall management is concerned about the rising rate of vacancy leading to economic unsustainability The reason for high mall vacancy rates can be ascribed to faulty tenant placement and irrational rental plan Existing studies on the tenant mix decisions focus more on inter store externality and not on the spatial logic Moreover normal industry practice follows rule of thumb instead of any scientific approach A bid rent model for profit maximization of individual stores is solved to identify the

relationship between area allocation and rental decision with the customer density at that point The customer density in turn depends on the accessibility and explained through visibility graph analysis and agent based simulation The findings support the superiority of configurational characteristic over metric distances A model for profit maximization of the entire shopping mall is proposed to explain the tenanting rental and anchor rent subsidization decisions based on logic of spatial configuration Space planning in this way can be considered as a tool for strategic decision making instead of an accommodator of functions
