Stem Kits Ai Overview Guide:

From AI Literacy to Generative AI Literacy Davy Tsz Kit Ng, Samuel Kai Wah Chu, Xianghan O'Dea, Jac Ka Lok Leung, 2026-01-01 This book presents a scoping review and critical discussion of generative artificial intelligence AI literacy within the context of education. The first section explores how generative AI technologies such as text generation, image synthesis, and video content creation impact teaching and learning processes, student engagement, creativity, and critical thinking. The second section addresses the implications and challenges of integrating generative AI into the everyday lives of both young and adult learners, with a focus on ethical considerations, privacy concerns, and potential biases. The third section offers recommendations for policymakers, researchers, and practitioners, along with questionnaires designed to assess generative AI literacy. Through the use of scoping review methodology, the book provides readers with a comprehensive understanding of the current landscape of generative AI literacy in education, as well as the broader impacts and applications of generative AI technologies in educational settings.

Robotics and Smart Autonomous Systems Rashmi Priyadarshini, Ram Mohan Mehra, Amit Sehgal, Prabhu Jyot Singh, 2024-11-25 The text discusses fundamental advanced concepts and applications of robotics and autonomous systems. It further discusses important topics such as robotics techniques in the manufacturing sector, applications of smart autonomous systems in the healthcare sector, resource optimization in mobile robotics, and smart autonomous transport systems. Features: Covers design and application aspects of robotic systems for implementing the concepts of smart manufacturing with reduced human intervention, better accuracy, and enhanced production capacity. Discusses techniques including supervised learning, unsupervised learning, and reinforced learning with real life examples. Highlights a unified intermodal approach for automated transportation including cars, trucks, ships, and port management. Explains the mechanical design of planetary rovers and the mechanical design of space manipulators, actuators, and sensors. Presents programming tools and platforms for autonomous robotic systems. The book is primarily written for senior undergraduates, graduate students, and academic researchers in fields including electrical engineering, electronics and communications engineering, computer science, and engineering and automotive engineering.

Antiviral Agents Catherine Adamson, 2021-01-21 Antiviral agents are used for the treatment of viral diseases. Antiviral drugs have been successfully developed and used clinically for a limited number of important human viral diseases notably caused by human immunodeficiency virus HIV hepatitis C virus HCV hepatitis B virus HBV herpes and influenza viruses. Despite the successes of these antiviral drugs issues with drug resistance and toxicity remain challenging. These challenges are driving research to identify new drug candidates and to investigate novel drug targets to develop new mechanistic drug classes. Antiviral agents are not available against many viruses that cause human disease and economic burdens in particular the development of antiviral agents against emerging and neglected viruses is increasingly becoming a priority. This book includes six review articles that discuss new antiviral strategies. The reviews either discuss advances relating to a specific virus or new therapeutic targets and approaches. The book includes 15 original research articles reporting new antiviral agents against a variety of clinically and economically important viruses and studies into the prevalence or acquisition of drug resistance. Overall this book is an exciting collection of new research and ideas relating to the development of antiviral agents
