### **Geometric and Harmonic Analysis on Homogeneous Spaces and Applications** Ali Baklouti, Hideyuki

Ishi, 2021-10-29 This book collects a series of important works on noncommutative harmonic analysis on homogeneous spaces and related topics. All the authors participated in the 6th Tunisian Japanese conference Geometric and Harmonic Analysis on homogeneous spaces and Applications held at Djerba Island in Tunisia during the period of December 16-19 2019. The aim of this conference and the five preceding Tunisian Japanese meetings was to keep up with the active development of representation theory interrelated with various other mathematical fields such as number theory, algebraic geometry, differential geometry, operator algebra, partial differential equations, and mathematical physics. The present volume is dedicated to the memory of Takaaki Nomura who organized the series of Tunisian Japanese conferences with great effort and enthusiasm. The book is a valuable resource for researchers and students working in various areas of analysis, geometry, and algebra in connection with representation theory.

### **Proceedings of the International Conference on Algebra 2010**

Wanida Hemakul, Sri Wahyuni, Polly Wee Sy, 2012 This volume is an outcome of the International Conference on Algebra in celebration of the 70th birthday of Professor Shum Kar Ping which was held in Gadjah Mada University on 7-10 October 2010. As a consequence of the wide coverage of his research interest and work it presents 54 research papers all original and referred, describing the latest research and development and addressing a variety of issues and methods in semigroups, groups, rings and modules, lattices and Hopf Algebra. The book also provides five well-written expository survey articles which feature the structure of finite groups by A. Ballester-Bolinches, R. Esteban-Romero and Yangming Li; new results of Gruber-Shirshov basis by L.A. Bokut, Yuqun Chen and K.P. Shum; polygroups and their properties by B. Davvaz; main results on abstract characterizations of algebras of  $n$  place functions obtained in the last 40 years by Wieslaw A. Dudek and Valentin S. Trokhimenko; Inverse semigroups and their generalizations by X.M. Ren and K.P. Shum. Recent work on cones of metrics and combinatorics done by M.M. Deza et al. is included.

### **Periodic Locally Compact Groups** Wolfgang Herfort, Karl H.

Hofmann, Francesco G. Russo, 2018-11-19 This authoritative book on periodic locally compact groups is divided into three parts. The first part covers the necessary background material on locally compact groups including the Chabauty topology on the space of closed subgroups of a locally compact group, its Sylow theory and the introduction classification and use of inductively monothetic groups. The second part develops a general structure theory of locally compact near abelian groups, pointing out some of its connections with number theory and graph theory and illustrating it by a large exhibit of examples. Finally the third part uses this theory for a complete enlarged and novel presentation of Mukhlin's pioneering work generalizing to locally compact groups Iwasawa's early investigations of the lattice of subgroups of abstract groups. Contents: Part I: Background information on locally compact groups; Locally compact spaces and groups; Periodic locally compact groups and their Sylow theory; Abelian periodic groups; Scalar automorphisms and the mastergraph; Inductively monothetic groups.

Part II Near abelian groups The definition of near abelian groups Important consequences of the definitions Trivial near abelian groups The class of near abelian groups The Sylow structure of periodic nontrivial near abelian groups and their prime graphs A list of examples Part III Applications Classifying topologically quasihamiltonian groups Locally compact groups with a modular subgroup lattice Strongly topologically quasihamiltonian groups **Linear Groups** Martyn R. Dixon, Leonid A. Kurdachenko, Igor Ya. Subbotin, 2020-04-03 Linear Groups The Accent on Infinite Dimensionality explores some of the main results and ideas in the study of infinite dimensional linear groups The theory of finite dimensional linear groups is one of the best developed algebraic theories The array of articles devoted to this topic is enormous and there are many monographs concerned with matrix groups ranging from old classical texts to ones published more recently However in the case when the dimension is infinite and such cases arise quite often the reality is quite different The situation with the study of infinite dimensional linear groups is like the situation that has developed in the theory of groups in the transition from the study of finite groups to the study of infinite groups which appeared about one hundred years ago It is well known that this transition was extremely efficient and led to the development of a rich and central branch of algebra Infinite group theory The hope is that this book can be part of a similar transition in the field of linear groups Features This is the first book dedicated to infinite dimensional linear groups This is written for experts and graduate students specializing in algebra and parallel disciplines This book discusses a very new theory and accumulates many important and useful results , 2007
