## Biodiversity and Conservation Biology

### Chapter Objectives

- Characterize the scope of biodiversity on Earth
- Describe ways to measure biodiversity
- Contrast background extinction rates and periods of mass extinction
- Evaluate the primary causes of biodiversity loss
- Specify the benefits of biodiversity
- Assess conservation biology and its practice
- Explain island biogeography theory and its application to conservation biology
- Compare and contrast traditional and more innovative biodiversity conservation efforts

### Outline

- I. Central Case: Saving the Siberian Tiger**
  - Up until the past 200 years, tigers roamed widely across the Asian continent from Turkey to northeast Russia to Indonesia.
  - Of the tigers that still survive in small pockets of their former range, those in the subspecies known as the Siberian tiger are the largest cats in the world.
  - For thousands of years, the Siberian tiger coexisted with the native people of what is today the Russian Far East, who equated the tiger with royalty and viewed it as a guardian.
  - The Russians who moved into and exerted control over the region in the early to mid-20th century had no cultural traditions that expressed respect for the animal, leading to the decline of the species.
