**Assessing Feasibility with Value-laden Models** Simon Hollnaicher, 2025-01-31 In this Open Access book the author investigates the value dimension of Integrated Assessment Models and their application to questions of feasibility Integrated models provide a quantified representation of the interaction between the socio economic system with the climate and serve as a pivotal tool at the intersection of climate science policymakers and society This book critically examines how IAMs approach the concept of feasibility It unpacks the value assumptions embedded within integrated modeling critiques the implicit normativity of these models and proposes principles for responsibly managing value judgments in scientific advice Arguing for a thick conception of feasibility one that integrates key normative dimensions it highlights the gap between conceptual discussions of feasibility and the scientific practices that inform feasibility assessments Addressed to both philosophers and integrated modelers this book sheds light on the implicit values shaping our collective visions for the future

**A Pragmatist Orientation for the Social Sciences in Climate Policy** Martin Kowarsch, 2016-09-01 While economic and other social science expertise is indispensable for successful public policy making regarding global climate change social scientists face trade offs between the scientific credibility policy relevance and legitimacy of their policy advice From a philosophical perspective this book systematically addresses these trade offs and other crucial challenges facing the integrated economic assessments of the

Intergovernmental Panel on Climate Change IPCC Based on John Dewey's pragmatist philosophy and an analysis of the value laden nature and reliability of climate change economics the book develops a refined science policy model and specific guidelines for these assessments of climate policy options The core idea is to scientifically explore the various practical implications of alternative climate policy pathways in an interdisciplinary manner together with diverse stakeholders This could facilitate an iterative deliberative public learning process concerning disputed policy issues This volume makes novel contributions to three strands of the literature 1 the philosophy of social science in policy 2 the philosophy of economics and 3 debates about the design of scientific assessments including the continuous IPCC reform debate This work is thus interesting for philosophers and other scholars reflecting on the science policy interface but also for assessment practitioners climate policy makers and economists The science policy approach developed in this volume has already influenced the recent socio economic IPCC assessment

Values and Objectivity in Science Hugh Lacey, 2005 Values and Objectivity in Science illuminates many of the ethical issues that arise concerning scientific practices and applications offering an account of how social and ethical values play important roles within science Hugh Lacey develops and clarifies his previous analysis by arguing for the importance of research being conducted under a plurality of strategies contrasting materialist strategies with agro ecological strategies By displaying the structure of current ethical controversies about the legitimacy of planting transgenic crops this book illustrates that sound thinking on such issues must be grounded on an adequate philosophy of science one that can clearly distinguish between the proper and the distorting roles of values in scientific practices This book will prove useful for science students and practitioners as well as those interested in the growing ethical questions involved in scientific practices
