*AI in Language Teaching, Learning, and Assessment* Pan, Fang, 2024-02-12 The introduction of Artificial Intelligence AI has ignited a fervent academic discourse AI's role is as both a powerful ally and a potential adversary in education. For instance, ChatGPT is a generative AI which mimics human conversation with impressive precision. Its capabilities span the educational spectrum from answering questions and generating essays to composing music and coding. Yet as with any innovation, its advent has sparked a spirited academic dialogue. *AI in Language Teaching, Learning, and Assessment* seeks to address these concerns with rigor and thoughtfulness. It explores the undeniable drawbacks of AI in language education and offers strategic insights into their prevention. It scrutinizes the resources and safeguards required to ensure the ethical and secure integration of AI in academic settings. This book lays out the multifaceted benefits of incorporating AI into language teaching, learning, and assessment. Its chapters dissect the transformative impact of AI on pedagogy, teaching materials, assessment methodologies, applied linguistics, and the broader landscape of language education development. This book is a valuable resource for language learners, educators, researchers, and scholars alike. It beckons to those who are keen on exploring and implementing AI in education as well as AI developers and experts seeking to bridge the chasm between technology and language education.

*Internet of Things, Artificial Intelligence and Blockchain Technology* R.Lakshmana Kumar, Yichuan Wang, T. Poongodi, Agbotiname Lucky Imoize, 2021-09-02 This book explores the concepts and techniques of IoT, AI, and blockchain. Also discussed is the possibility of applying blockchain for providing security in various domains. The specific highlight of this book is focused on the application of integrated technologies in enhancing data models, better insights, and discovery. Intelligent predictions, smarter finance, smart retail, global verification, transparent governance, and innovative audit systems. The book allows both practitioners and researchers to share their opinions and recent research in the convergence of these technologies among academicians and industry people. The contributors present their technical evaluation and compare it with existing technologies. Theoretical explanation and experimental case studies related to real-time scenarios are also included. This book pertains to IT professionals, researchers, and academicians working on fourth revolution technologies.

*AI\*IA 2005: Advances in Artificial Intelligence* Sara Manzoni, 2005-10-06 This volume collects the papers selected for presentation at the IX Congress of the Italian Association for Artificial Intelligence (AI\*IA) held in Milan at the University of Milano Bicocca, September 21-23, 2005. On the one hand, this congress continues the tradition of AI\*IA in organizing its biannual scientific meeting from 1989; on the other hand, this edition is a landmark in the involvement of the international community of artificial intelligence (AI) directly involving a broad number of experts from several countries in the Program Committee. Moreover, the peculiar nature of scientific research in artificial intelligence, which is intrinsically international and several consolidated international collaborations in projects and mobility programs allowed the collection and selection of papers from many different countries all around the world, enlarging the visibility of the Italian contribution.

within this research field Artificial intelligence is today a growing complex set of conceptual theoretical and methodological and technological frameworks offering innovative computational solutions in the design and development of computer based systems. Within this perspective researchers working in this area must tackle a broad range of knowledge about methods, results and solutions coming from different classical areas of this discipline. The congress was designed as a forum allowing researchers to present and discuss specialized results as general contributions to AI growth. Engineering Applications of Artificial Intelligence Aziza Chakir, Johannes Fernandes Andry, Arif Ullah, Rohit Bansal, Mohamed Ghazouani, 2024-02-19 Making intelligent devices and systems is the science and engineering of artificial intelligence AI. In order to solve many of the most difficult problems in computer science this important multidisciplinary discipline plays a crucial role in the field of technology nowadays. The book also addresses the topic of machine learning because it is closely related to AI. By no means is the list of subjects below intended to be comprehensive. The main objective of this book is to provide researchers, scientists, business professionals and academics insight into original theories and research findings on the use of human cognitive models in diverse real world computing applications. Through this book the authors built an interdisciplinary forum where researchers from many fields may share their work and explore how to engineer human brain processes, learning mechanisms and decision making processes. **Monthly Guide**, 1980-08    Electricity, 1895    **Convention** National Electric Light Association. Convention, 1930    The Iron Age, 1920    Chatgpt and Other Generative AI Tools Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years applications of generative artificial intelligence GAI have found rapidly growing use in medicine, science and daily life. Large language models LLMs opened up new avenues in particular for education. LLMs have been used to create interactive educational content for students, stimulate their curiosity, generate code explanations and develop assessment questions. Additionally, LLMs have been applied for language practice, anxiety alleviation and feedback provision. In higher education, LLMs have shown potential for assisting in medical exam preparation and clinical decision making. In school education, LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback. More recently, LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects. The fields of understanding of the effects of the use of LLM based applications in

classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies
