Each student demonstrates one of the laws below in their everyday living life.

1. When you jump from a high chair, the objects in the room move away from the center of the room.

Law 1:

Describe your reasoning: \_\_\_\_\_

2. When you're in a moving car, and it stops, you feel like you're moving. This happens when the forces of motion are not balanced. You feel like you're moving, but you're not moving. This is called inertia.

Law 2:

Describe your reasoning: \_\_\_\_\_

3. When you're walking, when you stop, the floor pushes back on you. This is called the law of action and reaction. For the floor to push back, you have to push forward.

## NEWTON'S SECOND LAW

Use the following equation to answer the questions below.

**Force = Mass x a**  
1. A 1000 kg whale is dropped at a rate of 10 m/s. Is the whale?

2. What is the rate of acceleration for a being pushed with a force of 1000 N?

3. A 100 kg computer experiences a rate of 10 m/s. Is the computer?

4. A 1000 kg balloon is flying at a rate of 10 m/s. Is the balloon?

5. What is the rate of acceleration for a planet with a mass of 1000 kg?

6. A 1000 kg motorcycle experiences a rate of 10 m/s. Is the motorcycle?

## NEWTON'S LAW

Newton's 1st Law  
For every action there is an equal and opposite reaction.

Type a sentence to complete the following sentence. You must put yourself into the sentence like this: *I am the person in the room.*

Why does pushing occur on the ground at night? (This is when you sleep about it.) Do you think you've never thought about it? You've been doing Newton's Third Law without knowing it!

Newton's First Law says that the person

isn't moving because the person is sleeping. This means that other people outside don't push with the person sleeping enough to move the Earth. (This is a pretty impressive effect, isn't it?)

Newton's First Law is the reason why a car doesn't move when it's parked. It's because why the car moves and why it's not moving. This goes like: Newton's First Law is the reason why a car moves and why it's not moving.

Newton's First Law is also the reason a ball doesn't move when it's not being thrown. (Gravity pulls the ball with a force of 9.8 m/s<sup>2</sup> and the ball responds by moving back with that same force. This results in a net force of 0 on the object, which is why it's not moving at all.) Just as Newton's First Law predicted.

The second half of the second law goes like: "The acceleration of an object is directly proportional to the mass of the object." (Newton's First Law says that the more mass, the less acceleration decreases.) If you apply the same force to the beach ball and the floating ball, both have a larger or not different motion than greater motion.

Both of these relationships can be proven. Force is mass x acceleration. If you have both the mass and the force, you can calculate the acceleration.

## Name: \_\_\_\_\_

## NEWTON'S LAW

Newton's 2nd Law  
The product of acceleration of an object times mass equals force.

Newton's Second Law is the product of acceleration times mass. This law describes the measurement's acceleration, which can be calculated with the following formula:

The first part of Newton's Second Law is objects proportional to the acting force of moving. If you apply a greater force, the object will be greater. In other words, there are 2 forces that are equal. If you push a ball harder, it will begin to move. If you push it really hard, it will begin to move. If you push it really soft, the ball will not move. (Newton's Second Law is saying to always play the ball at the right time, that's why you're reading this.)

Newton's Second Law is also the reason why a ball moves when it's thrown. (Newton's Second Law is the reason why a ball moves when it's thrown.)

Newton's Second Law is also the reason why a ball moves when it's thrown. (Newton's Second Law is the reason why a ball moves when it's thrown.)
