### **Research on Design for Prevention of Ditch Erosion on**

**Virginia Highways** ,1999 Roadside ditch erosion has been problematic on Virginia highways VDOT through the Virginia Transportation Research Council requested that roadside ditch erosion be investigated by means of a research project Virginia Tech was selected to conduct this study In support of this research design guidance documents were surveyed to learn the current established policy and procedures for soil data collection and reporting and the design practice for hydrologic and hydraulic analyses of roadside ditches Site visits to each of Virginia's nine construction districts were made to interview district personnel about their personal experience with roadside ditch design performance and erosion failures Current ditch design practices in nine other states were investigated through the collection and survey of state drainage manuals and phone interviews with DOT personnel Finally an extensive review of current literature was performed with the intent of investigating current research on ditch erosion and erosion control Results of the research indicate that three major factors are contributing to the occurrence of erosion in roadside ditches They include 1 insufficient soil information collected on road projects and reported in unusable formats for the hydraulic designers 2 overuse of default values and criteria in hydraulic design and 3 geographical and management issues not currently encompassed by current VDOT ditch design policies and procedures Recommendations directed at these factors are provided along with tables presenting updated correlations between site specific conditions and hydraulic parameters for design

,2016   **Access Management** Donald L. Bowman,1998 This report analyzes comprehensive highway access management programs and looks at the potential benefits and legal limits to Virginia adopting such a program to replace Virginia's rather limited site specific permitting process In 1942 Virginia passed legislation defining the right of private homeowners and commercial establishments to make connections to state highways Va Code 33 1 197 private entrances and 33 1 198 commercial entrances The statutes established a permit process for commercial and private entrances to state highways administered by VDOT in accordance with the Minimum Standards of Entrances to State Highways However the Minimum Standards do not establish a comprehensive access management plan for Virginia's highway systems and have been criticized for being too permissive In 1980 Colorado became the first state to enact a comprehensive highway access management code with strict safety and traffic criteria for private accesses to public highways Since that time Florida and

New Jersey have also adopted comprehensive programs However Virginia's access management process continues to be a case by case permit review process This report considers the relative benefits of access management analyzes the legal obstacles in Virginia for a comprehensive program and discusses options Virginia might consider The report also includes an analysis of Virginia's legal and regulatory framework within which an access management program would operate and two alternative models for access management regulation to assist policy makers Evaluation of the Virginia Department of Transportation's Residential Traffic Calming Guide Benjamin H. Cottrell, 2002 The purpose of this research was to evaluate the Virginia Department of Transportation's VDOT's Residential Traffic Calming Guide A 2 year pilot program served as a means to evaluate the Guide The results of the evaluation enabled VDOT to strengthen its Guide based to a large extent on the lessons learned in the pilot program and to prepare for effective statewide implementation of this customer service oriented program This report documents the activities of the pilot program and VDOT's Residential Traffic Calming Committee which administered the program Numerous conclusions were drawn by the researchers based on specific experiences during the pilot program The conclusions ranged from the usefulness of specific elements of the Guide actions that worked well for a particular county the description of side effects from having the pilot program in place lessons learned from specific traffic calming projects and a list of other activities that have occurred under the moniker of traffic calming The recommended changes to the Guide that were identified during this effort and incorporated in the latest version of the Guide are described An implementation plan outlines a suggested approach to transition from a pilot to a statewide program The plan emphasizes the Guide as a component of a residential traffic management program Virginia State Publications in Print, 1990

Grimes, 2007 This report describes an effort to determine the costs incurred by the Virginia Department of Transportation VDOT when reviewing land development proposals such as traffic impact studies comprehensive plan amendments rezonings and subdivision and site plans Cost estimates were derived from a survey of land development staff from VDOT's districts and residencies who perform the reviews on a regular basis The VDOT reviewers who participated in the survey were shown actual land development proposals taken from the archives of VDOT's Culpeper District Office and asked to provide an estimate of how long it would take to review each proposal The resulting estimates suggest that a review of even a relatively simple land development proposal will cost more than 1 000 which at the time of this writing is the statutory fee cap The report therefore recommends that 1 000 be used as the fee for review of a land development proposal The report also recommends that additional studies be conducted to develop a fee schedule that is fair and easy to administer and that recovers most of the costs VDOT incurs in performing reviews of land development proposals **House and Senate Documents** Virginia.
