Vehicle Propulsion Systems

Vehicle Propulsion Systems Lino Guzzella, Antonio Sciarretta, 2005-12-01 In this book the longitudinal behavior of road vehicles is analyzed. The main emphasis is on the analysis and minimization of the fuel and energy consumption. Most approaches to this problem enhance the complexity of the vehicle system by adding components such as electrical motors or storage devices. Such a complex system can only be designed by means of mathematical models. This text gives an introduction to the modeling and optimization problems typically encountered when designing new propulsion systems for passenger cars. It is intended for persons interested in the analysis and optimization of classical and novel vehicle propulsion systems. Its focus lies on the control oriented mathematical description of the physical processes and on the model based optimization of the system structure and of the supervisory control algorithms. This text has evolved from a lecture series at ETH Zurich. Prerequisites are general engineering topics and a first course in optimal control theory.

Propulsion

Systems for Hybrid Vehicles John M. Miller, 2008 Offering in depth coverage of hybrid propulsion topics energy storage systems and modelling and supporting electrical systems this book will be an invaluable resource for practising engineers and managers involved in all aspects of hybrid vehicle development modelling simulation and testing.

Developments In

High-Speed Vehicle Propulsion Systems S. N. B. Murthy, E. T. Curran, 1996 Annotation There have been impressive achievements in the last few years in the technologies associated with turboramjets and other combined cycle engines. These technologies including their thermal management and integration with the vehicle are the principal concerns of this volume. Drawing on the expertise of international engineers and researchers in the field of high speed vehicle propulsion systems these articles written by experts from the United States Russia Germany Japan Belgium and Israel highlight developments in the industry.

Design and Control of Automotive Propulsion Systems Zongxuan Sun, Guoming G. Zhu, 2014-12-20

Better Understand the Relationship between Powertrain System Design and Its Control Integration While powertrain system design and its control integration are traditionally divided into two different functional groups a growing trend introduces the integration of more electronics sensors actuators and controls into the powertrain system.

Propulsion Systems Alessandro Serpi, Mario Porru, 2019-10-07 The transport sector is one of the most valuable sectors in the world. It represents the large oil consumers but still relies mainly on fossil fuels. Since the world trend in fossil fuel use is expected to increase further a more sustainable transportation system is unavoidable to cope with emerging economic and social issues such as massive energy consumption and emissions of pollutant gases. In this regard this book provides an overview of some recent and promising technological advancements in propulsion systems ranging from on board components to different propulsion system architectures. In particular the book aims at giving a brief but significant insight into propulsion system design and architecture by covering different topics and application fields road marine and aerospace

Modeling and Control of Hybrid Propulsion System for Ground Vehicles Yuan Zou, Junqiu Li, Xiaosong Hu, Yann Chamaillard, 2018-07-02 This book focuses on the systematic design of architectures, parameters and control of typical hybrid propulsion systems for wheeled and tracked vehicles based on a combination of theoretical research and engineering practice. Adopting a mechatronic system dynamics perspective principles and methods from the fields of optimal control and system optimization are applied in order to analyze the hybrid propulsion configuration and controller design. Case investigations for typical hybrid propulsion systems of wheeled and tracked ground vehicles are also provided

Coleman, 1998 *Advanced Propulsion System for Hybrid Vehicles* L. V. Norrup, A. T. Lintz, 1980 A number of hybrid propulsion systems were evaluated for application in several different vehicle sizes. A conceptual design was prepared for the most promising configuration. Various system configurations were parametrically evaluated and compared. Design tradeoffs were performed and a conceptual design produced. Fifteen vehicle propulsion systems concepts were parametrically evaluated to select two systems and one vehicle for detailed design tradeoff studies. A single hybrid propulsion system concept and vehicle five passenger family sedan were selected for optimization based on the results of the tradeoff studies. The final propulsion system consists of a 65 kW spark ignition heat engine, a mechanical continuously variable traction transmission, a 20 kW permanent magnet axial gap traction motor, a variable frequency inverter, a 386 kg lead acid improved state of the art battery and a transaxle. The system was configured with a parallel power path between the heat engine and battery. It has two automatic operational modes electric mode and heat engine mode. Power is always shared between the heat engine and battery during acceleration periods. In both modes regenerative braking energy is absorbed by the battery
