

Introduction

Since most physical quantities have a both a size and a direction, we require a mathematical tool to describe those quantities. In this study guide we introduce the basic concept of the vector.

Lecture Notes: Introduction to Vectors

The arrow on the graph here is called a vector.

To find the x and y components of a vector we look at how far over and how up that arrow goes.

In this example, the distance over to the right (the x component) is 2.

The distance up (the y component) is 3.

So our vector points over 2, and up 3.

Example

Vector Components	
$(2, 3)$	
Starting Coordinates	Ending Coordinates
$(1, 1)$	$(3, 4)$

Example			
			From their beginning to their end, all three vectors go over 2 and up 3. Notice it doesn't matter where the vector begins on the graph.
