**Technology Rivalry Between the USA and China** Peter C.Y. Chow, 2025-02-19 This book addresses the geopolitics and geoconomics of technological rivalry between the world's two great powers the USA and China. It focuses on the semiconductor industry which owing to its dual use in civilian and defence sectors is critical to economic and national security interests. A diverse set of contributions from renowned scholars span wide ranging topics to holistically analyze contemporary USA China national security through a technological lens the shifting trade and technology policy in the USA the Chip 4 alliance as an industrial cartel technology sanctions and the voice of high tech industry in the USA the race for digital sovereignty in the Gulf region and in Africa Japan's grand strategy vis vis semiconductors a critical assessment of China's achievement on its self sufficiency and effort in reducing its reliance on foreign supplies the significance and the strategy of Taiwan's semiconductor in the future as well as how Taiwan can advance its national security through its status as a powerhouse of semiconductors Korea's semiconductor policy in response to international technology rivalry India's pursuit of semiconductors and a close investigation of decoupling and hostility between the two great powers

### Parallel

**Programming for Modern High Performance Computing Systems** Paweł Czarnul, 2018-03-05 In view of the growing presence and popularity of multicore and manycore processors accelerators and coprocessors as well as clusters using such computing devices the development of efficient parallel applications has become a key challenge to be able to exploit the performance of such systems. This book covers the scope of parallel programming for modern high performance computing systems. It first discusses selected and popular state of the art computing devices and systems available today. These include multicore CPUs manycore co processors such as Intel Xeon Phi accelerators such as GPUs and clusters as well as programming models supported on these platforms. It next introduces parallelization through important programming paradigms such as master slave geometric Single Program Multiple Data SPMD and divide and conquer. The practical and useful elements of the most popular and important APIs for programming parallel HPC systems are discussed including MPI OpenMP Pthreads CUDA OpenCL and OpenACC. It also demonstrates through selected code listings how selected APIs can be used to implement important programming paradigms. Furthermore it shows how the codes can be compiled and executed in a Linux environment. The book also presents hybrid codes that integrate selected APIs for potentially multi level parallelization and utilization of heterogeneous resources and it shows how to use modern elements of these APIs. Selected optimization techniques are also included such as overlapping communication and computations implemented using various APIs. Features Discusses the popular and currently available computing devices and cluster systems. Includes typical paradigms used in parallel programs. Explores popular APIs for programming parallel applications. Provides code templates that can be used for implementation of paradigms. Provides hybrid code examples allowing multi level parallelization. Covers the optimization of parallel programs
