Unsupervised Feature Extraction Applied to Bioinformatics Y-h. Taguchi, 2024-08-31 This updated book proposes applications of tensor decomposition to unsupervised feature extraction and feature selection The author posits that although supervised methods including deep learning have become popular unsupervised methods have their own advantages He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to difficult situations when there are many features variables while only small number of samples are available The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration and train tensor decomposition The author concludes by showing unsupervised methods and their application to a wide range of topics

Applications of Operations Research and Management Science for Military Decision Making William P. Fox, Robert Burks, 2019-08-28 Based on many years of applied research modeling and educating future decision makers the authors have selected the critical set of mathematical modeling skills for decision analysis to include in this book The book focuses on the model formulation and modeling building skills as well as the technology to support decision analysis The authors cover many of the main techniques that have been incorporated into their three course sequence in mathematical

modeling for decision making in the Department of Defense Analysis at the Naval Postgraduate School The primary objective of this book is illustrative in nature It begins with an introduction to mathematical modeling and a process for formally thinking about difficult problems illustrating many scenarios and illustrative examples The book incorporates the necessary mathematical foundations for solving these problems with military applications and related military processes to reinforce the applied nature of the mathematical modeling process **Advances of Soft Computing in Engineering** Zenon
