White,Julie Sliva Spitzer,2009 Demonstrates how connecting real life activities with mathematical concepts and building on students knowledge and experiences can help them excel in the classroom Strategies that can immediately be implemented to help students form better connections with the content they are studying are also described from publisher description [Engaging Families as Children's First Mathematics Educators](#) Sivanesh Phillipson,Ann Gervasoni,Peter Sullivan,2016-11-21 This book explores how professionals can engage and inspire parents to support their young children s mathematics learning Bringing together international experts researchers and scholars it proposes a framework for engaging with and supporting parents including those who are

less aware of the crucial development of children's mathematical skills in the early years. Focusing on mathematics learning from birth to 5 years the book's underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning including those families who seem alienated from education services. Specifically the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard. They describe effective strategies for engaging families in their children's mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children's mathematical learning and their development of positive attitudes towards learning. In closing hurdles and opportunities within the systems surrounding family engagement are addressed.
