Universe is still expanding and  
cooling from this explosion

**Big Bang  
Theory**

The universe began when an  
extremely dense concentration of  
matter (one single atom) that  
exploded

**Evidence**

**Red shift** - when we look at distant galaxies  
we see that their spectrum is shifting to the  
longer wave red color. This means they are  
moving away from us.

**Cosmic Background Radiation** - the light  
remains from the Big Bang have now become so  
stretched out from expansion that they  
are microwaves.

**Doppler Effect** - waves that are moving away from  
us are longer because they are being stretched.  
When waves are moving towards us, they are  
shorter because they are being compressed.

**Blue shift** - moving  
towards us
