Transportation Safety Data and Analysis ,2010 In recent years advanced statistical methods are being utilized in traffic safety studies to more accurately determine the effectiveness of roadway safety measures This report explains the process wherein a hierarchical Bayesian model is developed as a tool to analyze the effectiveness of two types of road safety measures raised medians and cable barrier **Journal of Public Transportation** ,2012 Dynamic Traffic Flow Modeling for Incident Detection and Short-term Congestion Prediction ,2005 The purpose of this report is to summarize the research activities that were performed during the first year of this research project In conducting this research the research team split into several independent groups each focusing on different aspects of the problem One group has been focused on using weather and traffic flow conditions as predictors of incident conditions Their activities are summarized in Chapter II Other groups have been focused on developing models for producing short term forecasts of potential congestion using current measured traffic conditions The results of these activities are summarized in Chapter III Finally the authors are beginning the process of developing a prototype tool that operators can use in a control center to display forecasted conditions The beginnings of a high level functional specification for the tool are provided in Chapter IV **Mathematical Reviews** ,2004

Evaluation of the City of Scottsdale Loop 101 Photo Enforcement Demonstration Program Simon Washington,2007 Speeding is recognized as one of the most important factors causing traffic crashes In 2005 30% of all fatal crashes were speeding related National Highway Traffic Safety Administration 2005 According to NHTSA the cost of speed related crashes is estimated to be 40 4 billion per year National Highway Traffic Safety Administration 2005 Intelligent Transportation Systems ITS now exist to reduce speeding related crashes by enforcing speed limits with camera based technologies These enforcement technologies are generically called speed cameras and have been effective on municipal streets and arterials in Arizona The City of Scottsdale began automated enforcement efforts in December of 1996 On October 25 2005 the Scottsdale City Council approved the nine month speed enforcement camera demonstration program on a 7 8 mile stretch of the SR 101 segment within Scottsdale The speed enforcement program SEP began on January 22 2006 and ended on October 23 2006 The demonstration program on the SR 101 freeway segment in Scottsdale is the first use of the fixed site photo enforcement equipment on a freeway in Arizona and is believed to be the first in the nation This study was conducted to estimate the impact of the SEP on traffic safety speed speeding behavior and daily travel time uncertainty More specifically the objectives were to estimate the impact of the SEP on speeding behavior the changes in mean speed due to the SEP the impact of the SEP on traffic safety in the enforcement zone the total travel time impacts and the economic impacts of the safety effects

Maze,Neal R. Hawkins,Garrett Burchett,2004 This report presents a national synthesis of rural expressway two way stop controlled TWSC intersection safety strategies and intersection designs and an analysis of Iowa expressway TWSC intersection crash characteristics A rural expressway is a multi lane highway with a divided median and with mostly at grade intersections although some intersections may be grade separated The synthesis of intersection strategies is conducted in two parts The first is a literature review and the second part is a national survey of strategies currently being applied by state transportation agencies The characterization of crash patterns at TWSC expressway intersections is examined through the analysis of 5 years of crash data at 644 intersections

Feasibility of Forecasting Highway Safety in Support of Safety Incentive and Safety Target Programs Simon Washington,2007 Using the frequency of fatal crashes from the current observation period e g month year etc as the prediction of expected future performance does not account for changes in safety that result from increases in exposure population additional roads new drivers etc This effect is especially pronounced in rapidly growing regions where safety changes are anticipated in the absence of safety investment programs The objective of this study was to examine the feasibility of predicting future fatal motor vehicle crashes given changes in future risk exposure so that reasonable safety targets can be established in support of a safety incentive or safety target programs Safety incentive or target programs can be used to set future safety targets i e fatal crashes for jurisdictions in Arizona

Evaluation of Iowa's Driver Improvement Program Konstantina Gkritza,2009 Statistical tests confirmed these numbers However the positive effect of satisfactory completion of DIP on survival time that is the time until the first conviction was not statistically significant 13 months after the DIP date Econometric model estimation results showed that regardless of the DIP outcome the likelihood of conviction occurrence and frequency of subsequent convictions depends on other factors such as age driver history and DIP location and interaction effects among these factors Low cost early intervention measures are suggested to enhance the effectiveness of Iowa s DIP These measures can include advisory and warning letters customized based on the driver s age sent within the first year after the DIP date and soon after the end of the probation period as well as a closer examination of DIP instruction across the 17 community colleges that host the program
