Merriam, 2014-06-28 Presents nearly all the important elementary and analytical methods of statistics designed for the needs of the geoscientist and completely free from higher mathematics Translated from the second German edition *Geographic Information Systems for Geoscientists* Graeme F. Bonham-Carter, 2014-05-18 Geographic Information Systems for Geoscientists Modelling with GIS provides an introduction to the ideas and practice of GIS to students and professionals from a variety of geoscience backgrounds The emphasis in the book is to show how spatial data from various sources principally paper maps digital images and tabular data from point samples can be captured in a GIS database manipulated and transformed to extract particular features in the data and combined together to produce new derived maps that are useful for decision making and for understanding spatial interrelationship The book begins by defining the meaning purpose and functions of GIS It then illustrates a typical GIS application Subsequent chapters discuss methods for organizing spatial data in a GIS data input and data visualization transformation of spatial data from one data structure to another and the combination analysis and modeling of maps in both raster and vector formats This book is intended as both a textbook for a course on GIS and also for those professional geoscientists who wish to understand something about the subject Readers with a mathematical bent will get more out of the later chapters but relatively non-numerate individuals will understand the general purpose and approach and will be able to apply methods of map modeling to clearly defined problems **Numerical Geology** Nicholas M.S.
