Structural Steel Design, Jack C. McCormac, Stephen F. Csernak, 2012. Structural Steel Design 5e is ideal for undergraduate courses in Steel Design. It is also useful as a reference for civil and environmental engineering professionals. This best selling text has been fully updated to conform to the latest American Manual of Steel Construction. The material is presented in an easy to read reader friendly style. **Applied Structural Steel Design**, Leonard Spiegel, George F. Limbrunner, 1986. Good. No Highlights. No Markup. all pages are intact. Slight Shelfwear may have the corners slightly dented, may have slight color changes, slightly damaged spine. **Design of Steel Structures**, Elias G. Abu-Saba, 2012-12-06. This book is intended for classroom teaching in architectural and civil engineering at the graduate and undergraduate levels. Although it has been developed from lecture notes given in structural steel design, it can be useful to practicing engineers. Many of the examples presented in this book are drawn from the field of design of structures. Design of Steel Structures can be used for one or two semesters of three hours each on the undergraduate level. For a two semester curriculum, Chapters 1 through 8 can be used during the first semester. Heavy emphasis should be placed on Chapters 1 through 5 giving the student a brief exposure to the consideration of wind and earthquakes in the design of buildings. With the new federal requirements vis a vis wind and earthquake hazards, it is beneficial to the student to have some understanding of the underlying concepts in this field. In addition to the class lectures, the instructor should require the student to submit a term project that includes the complete structural design of a multi story building using standard design procedures as specified by AISC Specifications. Thus the use of the AISC Steel Construction Manual is a must in teaching this course. In the second semester, Chapters 9 through 13 should be covered. At the undergraduate level, Chapters 11 through 13 should be used on a

limited basis leaving the student more time to concentrate on composite construction and built up girders

**Steel: Design, Properties and Applications** Felix Sampson,2021-11-16 Steel design or structural steel design is a sub discipline of structural engineering that is used to design steel structures Steel is an alloy which is made up of iron and carbon The tensile strength of steel is high which makes it hard and strong Designing and construction of steel structures depend on chemical composition and mechanical properties of steel Two commonly used methods for designing steel structures are allowable strength design method ASD and load and resistance factor design method LRFD Steel is widely used in automobile industry infrastructure business construction of roads small and heavy instruments and equipments This book unravels the recent studies in the field of steel design and its applications It unfolds the innovative aspects of steel design which will be crucial for the progress of this field in the future This book attempts to assist those with a goal of delving into this field of study
