**The Voyage of the Beagle** Charles Darwin,2013-11-27 The Voyage of the Beagle is Charles Darwin's account of the momentous voyage which set in motion the current of intellectual events leading to **The Origin of Species**    **The Principia** Sir Isaac Newton,2010-12-29 Sir Isaac Newton's Principia Mathematica Mathematical Principles is considered to be among the finest scientific works ever published His grand unifying idea of gravitation with effects extending throughout the solar system explains by one principle such diverse phenomena as the tides the precession of the equinoxes and the irregularities of the moon's motion Newton's brilliant and revolutionary contributions to science explained the workings of a large part of inanimate nature mathematically and suggested that the remainder might be understood in a similar fashion By taking known facts forming a theory that explained them in mathematical terms deducing consequences from the theory and comparing the results with observed and experimental facts Newton united for the first time the explication of physical phenomena with the means of prediction By beginning with the physical axioms of the laws of motion and gravitation he converted physics from a mere science of explanation into a general mathematical system    **THE WORLDLY TRAVELERS**

**The Origin of Species** Charles Darwin, Since its publication in 1859 The Origin of Species has been the focal point of debate Darwin's analysis of flora and fauna calls into question the long held concepts of spontaneous generation divine creation and the unrelatedness of many species Instead he argues for Natural Selection species survive and evolve in response to environmental conditions and other circumstances through a process in which those creatures and plants with stronger more enduring characteristics live to beget more adaptable offspring It was Darwin's research aboard the H M S Beagle that led to the clash of intellectual titans religion and science over the true nature of humankind Here is the book that started one of the greatest debates of the Western world    **On the Motion of**

**the Heart and Blood in Animals** William Harvey, William Harvey 1578 1657 was a rebel in medical science Contrary to contemporary practice he began his epoch making investigation into the action of the heart and the blood s circulation by minutely observing their action in live animals and by a lengthy series of dissections rather than by mere reliance on the anatomical lessons of ancient medicine and philosophy On the Motion of the Heart and Blood in Animals including explanations of heart valves and arterial pulse stands as a triumph of true scientific inquiry and is still regarded as one of the greatest discoveries in physiology

**The Forces of Matter** Michael Faraday, 2009-12-02 Michael Faraday 1791 1867 was one of the world s greatest experimental philosophers and popularizers of science These six extraordinary lectures on gravitation cohesion chemical affinity heat magnetism and electricity were intended for young audiences Together they offer the reader a fascinating introduction to some of Faraday s most important work on the correlation between the physical forces of the universe

**On the Revolutions of Heavenly Spheres** Nicolaus Copernicus, 2010-08-27 The Ptolemaic system of the universe with the earth at the center had held sway since antiquity as authoritative in philosophy science and church teaching Following his observations of the heavenly bodies Nicolaus Copernicus 1473 1543 abandoned the geocentric system for a heliocentric model with the sun at the center His remarkable work On the Revolutions of Heavenly Spheres stands as one of the greatest intellectual revolutions of all time and profoundly influenced among others Galileo and Sir Isaac

Newton

**The Elements of Natural Philosophy** William Thomson, One of the most celebrated scientists of the 19th century William Thomson Lord Kelvin was said to have more letters after his name than any man in the British Empire His prodigious accomplishments included both theoretical insights and significant inventions Among his contributions to theory were advances in hydrodynamics an innovative synthesis of the mathematical relationship between electricity and heat and major work in the second law of thermodynamics In the practical realm he created the absolute temperature scale which bears his name worked on the development of the first transatlantic telegraph cable and invented a telegraph receiver a compass adopted by the British Admiralty a form of analog computer for measuring tides and sounding equipment Always in the forefront of the leading scientists of the day he collaborated with James Clerk Maxwell Hermann von Helmholtz James Prescott Joule and Peter Guthrie Tait The Elements of Natural Philosophy was done with Tait a pioneering physicist and mathematician whose work in advanced algebra formed the basis of vector analysis and was instrumental in the later development of modern mathematical physics An abridgement of their original Treatise on Natural Philosophy this work was designed to be accessible to students with a basic knowledge of algebra geometry and trigonometry As such it is a book that nonspecialists can still appreciate Like Isaac Newton s great summation of natural philosophy in the late 17th century The Principia Mathematica this work remains of interest to historians of science because it represented a similar summation of the grand synthesis that scientists building upon Newton s work envisioned at the end of the 19th century Not long after its publication however was the advent of relativity and quantum physics which considerably changed and enlarged the picture

of the natural world as conceived by earlier generations of scientists

### **Epitome of Copernican Astronomy and**

**Harmonies of the World** Johannes Kepler, 2012-07-03 The brilliant German mathematician Johannes Kepler 1571-1630 one of the founders of modern astronomy revolutionized the Copernican heliocentric theory of the universe with his three laws of motion that the planets move not in circular but elliptical orbits that their speed is greatest when nearest the sun and that the sun and planets form an integrated system This volume contains two of his most important works The Epitome of Copernican Astronomy books 4 and 5 of which are translated here is a textbook of Copernican science remarkable for the prominence given to physical astronomy and for the extension to the Jovian system of the laws recently discovered to regulate the motions of the Planets Harmonies of the World book 5 of which is translated here expounds an elaborate system of celestial harmonies depending on the varying velocities of the planets

**Guide to Reprints**, 2009 *The Graphic*, 1922 *The Journal of Education*, 1892 *Totem and Taboo* Sigmund Freud, 2000-03-01

In this controversial study Freud applies the theories and evidence of his psychoanalytic investigations to the study of aboriginal peoples and by extension to the earliest cultural stages of the human race before the rise of large scale civilizations Relying on the reports of ethnographers such as J G Frazer E B Tylor and others Freud points out the striking parallels between the cultural practices of native tribal groups and the behavior patterns of neurotics His ultimate aim is to shed light on the psychological factors involved in the development of culture in the same way as he analyzed the unconscious motivations of neurotic individuals Beginning with a discussion of the incest taboo which is one of the main features of the totemic tribal structure he compares the taboo to the infantile stage of individual psychological development in which the male child experiences incestuous sexual feelings for his mother and the girl for her father He draws parallels between some of the elaborate taboo restrictions seen in these early cultures and the scrupulous rituals of compulsion neurotics who in a similar fashion are wrestling with the ambivalent emotions aroused by the incest taboo The implication is that many of the ceremonies and rituals of culture develop as a psychological reaction to the incest taboo which prohibits the acting out of an infantile impulse that would be socially destructive Freud contends that cultures evolve through three main stages the animistic the religious and the scientific The earliest stage of animism corresponds to the narcissistic phase of individual development when the child overvalues the importance and influence of his inner psychic life on the outer world In the religious stage of culture humanity realizes that its own conceptions do not have full power to control outer reality and attributes this power to deities who nonetheless can be manipulated through religious ceremony This stage of culture corresponds to the individual growth phase of dependence on the parents The scientific stage is

tantamount to the mature phase of individual development in which the individual recognizes his very limited power to control the universe and accepts the reality of his own death as well as all other natural realities Freud concludes by invoking his famous Oedipus complex as the key to the development of culture just as it is the main conflict underlying all neurotic illness in his theory The repressed psychological urge to kill the father as the rival for the mother's affections is the underlying motive for the symbols and ceremonies of religion with all its many sacrificial rituals of expiation and its notions of angry gods original sin and humankind's guilt and need for atonement Although Freud's theories and life are controversial today this masterful synthesis and its undeniable influence on later scholars of religion anthropology and psychology make it an indispensable work    **The Works of Charles Darwin** Charles Darwin,1987    **"The" Quarterly Review** ,1898

**The Quarterly Review** William Gifford,Sir John Taylor Coleridge,John Gibson Lockhart,Whitwell Elwin,William Macpherson,William Smith,John Murray,Rowland Edmund Prothero (Baron Ernle),George Walter Prothero,1898    **Treatise of Man** Rene Descartes,2003-07 Besides his more famous works of philosophy Discourse on Method Meditations on First Philosophy and Principles of Philosophy Descartes devoted a great deal of time and thought to the study of physiology and anatomy An account of his activities in 1629 reports that he visited butcher shops on an almost daily basis to study specific animal organs and he practiced dissection and even vivisection to explore the workings of major organ systems In the 1630s he assisted in the dissection of human cadavers all to satisfy his intense curiosity about how bodies animal and human work The fruits of this research can be found in his Treatise of Man a work that he decided not to publish for fear of suffering the same fate as Galileo Consequently this fascinating treatise did not appear until twelve years after his death Among its many intriguing features are his detailed descriptions of the nervous system and its interactions with the muscles to create movement in response to stimulus Though we now know that many of these details are wrong Descartes understanding that much of the body functions as a machine was a stroke of genius He is the first to describe the reflex arc anticipating Pavlov and the behaviorists by almost 300 years The idea of the body as a kind of animal machine that functions according to physical laws was an immense advance over the previous scholastic notions based on Aristotle which merely begged the question of how the various organs of the body work by stating that it is in their nature to perform their specific functions This is a landmark work that students of history medicine biology and the history of science will find richly rewarding
