*Statistical Quality Control for the Food Industry* Merton R. Hubbard, 2013-04-17 If an automobile tire leaks or an electric light switch fails if we are short charged at a department store or erroneously billed for phone calls not made if a plane departure is delayed due to a mechanical failure these are rather ordinary annoyances which we have come to accept as normal occurrences Contrast this with failure of a food product If foreign matter is found in a food if a product is discolored or crushed if illness or discomfort occurs when a food product is eaten the consumer reacts with anger fear and sometimes mass hysteria The offending product is often returned to the seller or a disgruntled letter is written to the manufacturer In an extreme case an expensive law suit may be filed against the company The reaction is almost as severe if the failure is a difficult to open package or a leaking container There is no tolerance for failure of food products Dozens of books on quality written for hardware or service industries discuss failure rates product reliability serviceability maintainability warranty and repair Manufacturers in the food industry

cannot use these measurements food reliability must be 100% failure rate 0% Serviceability maintainability warranty and repair are meaningless terms to food processors

**Modern Statistical Quality Control and Improvement** Nicholas R. Farnum, 1994 Farnum's text takes a state of the art approach to quality management From the outset it emphasizes the modern philosophy of continuous quality improvement and quality control It is written for courses where both modern statistical methods for quality and their implementation into business are covered In straightforward terms the book explains the concepts and techniques that are essential to quality control including cutting edge topics

Frontiers in Statistical Quality Control 8 Hans-Joachim Lenz, Peter-Theodor Wilrich, 2006-08-08 In Canada acceptance sampling has been used in legal metrology applications for nearly four decades One of its principal uses has been in the quality control of utility meters

that measure electricity or natural gas supplied to consumers By law such meters must be inspected for conformance to specification requirements prior to use and be periodically inspected while in use With few exceptions due to the numerous utility companies in the country and their varied practices the meters exist in the form of isolated lots for inspection purposes The proportion of nonconforming meters in a lot has traditionally defined lot quality for utility meter sampling inspection purposes Another principal application of acceptance sampling has been in the quality control of the net contents of packaged products sold in the marketplace Such products include those sold on the basis of such measures as weight volume length and area In this particular application products are also usually inspected on an isolated lot basis for regulatory purposes However lot quality is usually measured on the basis of two criteria for such products the proportion of nonconforming packages in the lot and the lot mean quantity This section reviews Canadian quality control practices in these two areas of application highlighting some of the deficiencies and issues Three class sampling plans are proposed as a possible solution to some of these deficiencies and issues **Statistical Quality Control Methods** Irving W.
