Spillers,Susan Finger,2013-03-07 In 1984 Nam Sub who was then the Assistant Director for Engineering at the National Science Foundation NSF created the Design Theory and Methodology Program Among his goals in creating this program were to develop a science of engineering design and to establish design as an accepted field of engineering research From 1984 to 1986 this program was directed by Susan Finger from 1986 to the present Jack Dixon has been the director The program itself has covered a broad range of disciplines from chemical engineering to architecture and a broad range of research paradigms from psychological experiments to mathematical models The present volume is based on the second NSF Grantee Workshop on Design Theory and Methodology called Design Theory 88 which was held June 2 5 1988 at Rensselaer Polytechnic Institute in Troy NY USA It is however not strictly a proceedings since it includes some material that was not presented at a the Workshop and since it omits some papers and discussions that were presented at the Workshop At the Workshop invited speakers presented overviews of six different research areas based on summaries submitted in advance by the grantees of the Design Theory and Methodology Program Since most of the speakers were not supported under the NSF program they brought fresh views to it The other papers in this book were submitted directly to this volume and were not presented at the Workshop **The View from 4-Space** Antony Sutton,2015-11-19 We live in the materialist physical world

of three dimensions or 3 space What we observe with our senses is what is real If it cannot be observed and measured it does not exist This is a sure comfortable world the ability to observe and measure gives us certainty With this certainty we have in the last 200 years built an industrial society with technologies based on measurable energies and devices controlled by tight all embracing and not to be challenged physical laws Except that we have a problem These physical 3 space laws do not

embrace or explain every observation There are numerous exceptions anomalies and inconsistencies to the laws Moreover our 3 space technology ignores even the possibility that there may exist forces and activities we cannot measure or observe In brief our reality is incomplete and if incomplete our human laws are also incomplete So we ask is there another reality Another dimension which originates these anomalies and inconsistencies that are not explainable in 3 space terms That our puzzling anomalies are actually the effects of an unseen causal source This book explores technological anomalies to find they indeed form a paradigm that cannot be explained in physical materialist terms This alternate paradigm cannot be explained with our 3 space terms but has its own set of laws and conditions This we call 4 space and the view from 4 space is awe inspiring to say the least This paradigm has the seeds of and is the basis of future technology
