The Vision Revolution The Vision Revolution:

The Vision Revolution Mark Changizi, 2009-06-02 In *The Vision Revolution* How the Latest Research Overturns Everything We Thought We Knew About Human Vision Mark Changizi prominent neuroscientist and vision expert addresses four areas of human vision and provides explanations for why we have those particular abilities complete with a number of full color illustrations to demonstrate his conclusions and to engage the reader Written for both the casual reader and the science buff hungry for new information *The Vision Revolution* is a resource that dispels commonly believed perceptions about sight and offers answers drawn from the field's most recent research Changizi focuses on four why questions 1 Why do we see in color 2 Why do our eyes face forward 3 Why do we see illusions 4 Why does reading come so naturally to us

Why Do We See in Color It was commonly believed that color vision evolved to help our primitive ancestors identify ripe fruit Changizi says we should look closer to home ourselves Human color vision evolved to give us greater insights into the mental states and health of other people People who can see color changes in skin have an advantage over their color blind counterparts they can see when people are blushing with embarrassment purple faced with exertion or the reddening of rashes Changizi's research reveals that the cones in our eyes that allow us to see color are exquisitely designed exactly for seeing color changes in the skin And it's no coincidence that the primates with color vision are the ones with bare spots on their faces and other body parts Changizi shows that the development of color vision in higher primates closely parallels the loss of facial hair culminating in the near hairlessness and highly developed color vision of humans

Why Do Our Eyes Face Forward Forward facing eyes set us apart from most mammals and there is much dispute as to why we have them While some speculate that we evolved this feature to give us depth perception available through stereo vision this type of vision only allows us to see short distances and we already have other mechanisms that help us to estimate distance Changizi's research shows that with two forward facing eyes primates and humans have an x-ray ability Specifically we're able to see through the cluttered leaves of the forest environment in which we evolved This feature helps primates see their targets in a crowded encroached environment To see how this works hold a finger in front of your eyes You'll find that you're able to look through it at what is beyond your finger One of the most amazing feats of two forward facing eyes Our views aren't blocked by our noses beaks etc

Why Do We See Illusions We evolved to see moving objects not where they are but where they are going to be Without this ability we couldn't catch a ball because the brain's ability to process visual information isn't fast enough to allow us to put our hands in the right place to intersect for a rapidly approaching baseball If our brains simply created a perception of the way the world was at the time light hit the eye then by the time that perception was elicited which takes about a tenth of a second for the brain to do time would have marched on and the perception would be of the recent past Changizi explains Simply put illusions occur when our brain is tricked into thinking that a stationary two dimensional picture has an element that is moving Our brains project the moving element into the future and as a result we

don't see what's on the page but what our brain thinks will be the case a fraction of a second into the future Why Does Reading Come So Naturally to Us We can read faster than we can hear which is odd considering that reading is relatively recent

The Vision Revolution Mark Changizi, 2011-01-11 A radically new perspective on human vision is emerging Groundbreaking research by evolutionary scientist and neurobiologist Mark Changizi is driving a revolution in our understanding of human vision In asking why we see the way we do Changizi overturns existing beliefs and provides new answers to age old questions Why do our eyes face forward While binocular vision was helpful to our primate ancestors its importance for 3 D vision is exaggerated Squirrels jump from branch to branch just fine with sideways facing eyes and many athletes including Hockey Hall of Famer Frank McGee play with only one eye HINT We evolved in a highly leafy environment Why do we see in color when most other mammals do not Its not because it helped our ancestors find ripe fruit Our color vision has evolved to be extremely sensitive to specific sets of color changes HINT Primates with color vision like us are the only ones who have areas of bare skin Why do we see optical illusions Its not the result of glitches in our visual system Optical illusions can be traced back to the same specific property of vision HINT We are able to catch a ball coming at us much more effectively than we should given the speed at which our brains process visual input Why do we absorb information so readily by reading Its not because weve evolved to read evolutionarily reading and writing are recent developments HINT Language is designed to exploit skills weve refined over tens of millions of years In *The Vision Revolution* Changizi details the conclusions of his innovative fieldwork and their mind blowing implications for our understanding not just of human vision but of the way we interact with the world in which we live *The Myth of the Nation and the Vision of Revolution* Jacob Leib Talmon, Jacob Laib Talmon, Ya'aqov Leyb Talmon, 1981-01-01 [The Vision Thing](#) Thomas Singer, 2014-01-14 Contemporary politics goes on at a mythic level This is the provocative argument put forward in this unique book which results from the collaboration of practising politicians organisational and political consultants scholars of mythology and culture and Jungian analysts from several countries The first part of the book focuses on leadership and vision and features a reflection on myth and leadership by former U S Senator Bill Bradley The second part deals with the way the theme of the one and the many works itself out in politics today From the perspective of the many there are chapters on factionalism ethnic strife genocide and multiculturalism From the perspective of the one there are chapters on the economic myth and gender politics showing how these bring coherence to today's confused political scene culminating in the suggestion that the modern political psyche is itself in the midst of a rite of passage The relevance of the book to the practice and study of politics mainstream and marginal cannot be overemphasised and the book will provide stimulating reading for practitioners and students in these areas as well as for those engaged in psychological work such as therapy counselling or analysis
