[Value Chain Dynamics in a Biodiverse Environment](#) Konstadinos Mattas, George Baourakis, Constantin Zopounidis, Christos Staboulis, 2024-02-22

This book offers comprehensive insights into the latest developments in biodiversity sustainability and agri-food supply chains, fostering an informed approach to policymaking decisions in the agriculture and agri-food industry within the global economy. By addressing key societal and environmental challenges such as desertification, floods, epidemics, rising trade costs, and food insecurity, it presents pioneering research initiatives to guide informed decision making. Addressing the inadequate sustainability performance of agri-food supply chains due to complex stakeholder interactions and conflicting objectives, the book includes chapters on mapping the Cretan vegetable supply chain, trade initiatives in Latin America and the Caribbean, cooperative member commitment, sustainable food consumption patterns, water resource management in Africa, value chain development, a financial analysis of the brewery industry, and the value chain of carob flour production. The book aims to promote biodiversity conservation by establishing sustainable supply chains in the global agri-food sector. Given its scope, the book is intended for a diverse audience, including academics, businesses, policymakers, and stakeholders.

[Simulating Social Complexity](#) Bruce Edmonds, Ruth Meyer, 2017-11-24

This volume examines all aspects of using agent or individual-based simulation. This approach represents systems as individual elements having their own set of differing states and internal processes. The interactions between elements in the simulation represent interactions in the target systems. What makes this social is that it can represent an observed society. Social systems include

all those systems where the components have individual agency but also interact with each other. This includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction. These systems are central to our lives but are among the most complex known. This poses particular problems for those who wish to understand them. The complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also inadequate for relating intricate cause and effect. This is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems. This handbook marks the maturation of this new field. It brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged. This second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development. Revised existing content will keep the book up to date with recent developments. This volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues. It will also help those already in the field by providing accessible overviews of current thought. The material is divided into four sections: Introduction, Methodology, Mechanisms and Applications. Each chapter starts with a very brief section called 'Why read this chapter' followed by an abstract which summarizes the content of the chapter. Each chapter also ends with a section on 'Further Reading'. Whilst sometimes covering technical aspects, this second edition of *Simulating Social Complexity* is designed to be accessible to a wide range of researchers, including both those from the social sciences as well as those with a more formal background. It will be of use as a standard reference text in the field and also be suitable for graduate level courses.

### **The SAGE Handbook of Qualitative Business and Management Research Methods**

Catherine Cassell, Ann L Cunliffe, Gina Grandy, 2021-08-04. *The SAGE Handbook of Qualitative Business and Management Research Methods* provides a state of the art overview of qualitative research methods in the business and management field. The Handbook celebrates the diversity of the field by drawing from a wide range of traditions and by bringing together a number of leading international researchers engaged in studying a variety of topics through multiple qualitative methods. The chapters address the philosophical underpinnings of particular approaches to research, contemporary illustrations, references and practical guidelines for their use. The two volumes therefore provide a useful resource for Ph D students and early career researchers interested in developing and expanding their knowledge and practice of qualitative research. In covering established and emerging methods, it also provides an invaluable source of information for faculty teaching qualitative research methods. The contents of the Handbook are arranged into two volumes covering seven key themes: Volume One: History and Tradition; Part One: Influential Traditions underpinning qualitative research; positivism; interpretivism; pragmatism; constructionism; critical poststructuralism; hermeneutics; postcolonialism; critical realism; mixed methods; grounded theory; feminist and indigenous approaches. Part Two: Research Designs; ethnography; field research; action research; case studies.
