Six Degrees The Science Of A Connected Age:

Six Degrees Duncan J. Watts, 2004 Six degrees of separation is a cliché as is it's a small world both clichés of the language and clichés of everyone's experience We all live in tightly bonded social networks yet linked to vast numbers of people more closely than we sometimes think The New Science of Cities Michael Batty, 2017-07-28 A proposal for a new way to understand cities and their design not as artifacts but as systems composed of flows and networks In The New Science of Cities Michael Batty suggests that to understand cities we must view them not simply as places in space but as systems of networks and flows To understand space he argues we must understand flows and to understand flows we must understand networks the relations between objects that compose the system of the city Drawing on the complexity sciences social physics urban economics transportation theory regional science and urban geography and building on his own previous work Batty introduces theories and methods that reveal the deep structure of how cities function Batty presents the foundations of a new science of cities defining flows and their networks and introducing tools that can be applied to understanding different aspects of city structure He examines the size of cities their internal order the transport routes that define them and the locations that fix these networks He introduces methods of simulation that range from simple stochastic models to bottom up evolutionary models to aggregate land use transportation models Then using largely the same tools he presents design and decision making models that predict interactions and flows in future cities These networks emphasize a notion with relevance for future research and planning that design of cities is collective action **Network Science** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2006-01-15 The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military's dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science *Consequential Strangers: Turning Everyday Encounters Into Life-Changing Moments* Melinda Blau, Karen L.
