Database Application Programming with Linux Brian Jepson,Joan Peckham,Ram Sadasiv,2000-07-31 All the tools and techniques you ll need to get started on database programming with Linux Linux s popularity as an enterprise programming solution has skyrocketed recently thanks to support from major database software providers With new software coming out each year and constant improvements in

existing software programmers need to be able to develop database applications using Linux Written by experts in the database and open source communities this comprehensive hands on guide provides all the tools techniques and skills you ll need to start your way to becoming a Linux database expert Bringing you quickly up to speed on real world database development basics the book begins with software design basics including requirements gathering database and user interface design and Object oriented design You ll then discover in depth discussions of database engines and APIs such as PostgreSQL MiniSQL Sybase and Oracle design tools and programming languages such as Java Perl and C In addition you ll learn more about application frameworks components and distributed components And you ll find the most up to date coverage of Linux database applications to help make this an indispensable resource With this book you ll gain a better understanding of the critical pieces of Linux project planning and development including Design and specification issues Database design and theory User interface design principles UML and Patterns for object oriented analysis and design You ll also learn about Getting started with PostgreSQL MySQL Sybase Oracle and MiniSQL Implementation level differences between various databases Database development Administration and modeling tools Programming with CORBA The companion Web site at www.wiley.com/compbooks/jepson features Example programs Reusable code Visit our Web site at www.wiley.com/compbooks *Algorithm Engineering* ,2001 [A Combined Neural Network Approach for the Selection and Combination of Heterogeneous Data Sources for Gene Pair Prediction in Yeast](#) Kelly Dun,2005 **Movement of Red Diamond Rattlesnakes (crotalus Ruber Ruber) in Heterogeneous Landscapes in Coastal Southern California** Jeff Alfred Tracey,2000 [Model-based Clustering of Genomic Aberrations](#) Hyuna Yang,2005 [Genome Research](#) ,2002

[Genome Sequencing Technology and Algorithms](#) Sun Kim,2008 The 2003 completion of the Human Genome Project was just one step in the evolution of DNA sequencing This trailblazing work gives researchers unparalleled access to state of the art DNA sequencing technologies new algorithmic sequence assembly techniques and emerging methods for both resequencing and genome analysis *An Integrated Systems Approach to the Development of Winter Maintenance* ,2006 Winter road maintenance operations require many complex strategic and operational planning decisions The five primary problems involved in this intricate planning procedure include locating depots designing sectors routing service vehicles scheduling vehicles and configuring the vehicle fleet The complexity involved in each of these decisions has resulted mainly in research that approaches each of the problems separately and sequentially which can lead to isolated and suboptimal solutions After discussing the complexity of the relaxed subproblems that would need to be solved to optimize the intricate winter maintenance operations the research turns to a heuristic approach to more feasibly address the interrelated problems This report subsequently presents a systematic heuristic based optimization approach to integrate the winter road maintenance planning decisions for depot location sector design vehicle route design vehicle scheduling and fleet configuration The approach presented is illustrated through an example of public sector winter road maintenance planning

for a rural transportation network in Boone County Missouri When applied to the real world winter road maintenance planning problems for Boone County the methodology delivered very promising results The solution methodology successfully achieves the objective of a more integrated and less sequential approach to the problems considered The integrated solution would allow the Missouri Department of Transportation MoDOT to maintain the same high level of service with significantly fewer resources The results indicate that this methodology is a successful step towards solving realistic multiple depot problems involving heterogeneous winter maintenance fleets
