Cylinder Head

The cylinder head is cast in one piece from a cast iron alloy to provide a stable housing for the overhead camshaft.

The tappet housing is integrated in the cylinder head (4).

The cylinder head has separate inlet and outlet chambers with provision for each cylinder (5).

The fuel channel to the unit injection has been drilled lengthwise through the cylinder head and has a long straight space around each and injector (2).

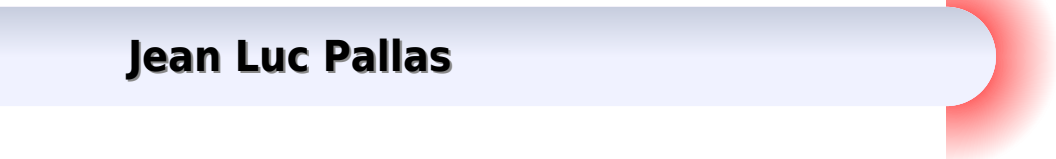

The oil pressure to the roller anti mechanism can be fed through the channel in plug (2).

For camshaft and roller anti fabrication, a channel has been drilled centrally in the left side of the cylinder head (3).

The valve guides are manufactured of alloyed cast iron. All valve guides are equipped with valve stem seals (at both). The valve seals are replaceable.
