The Cytokine Network

**Takayuki Yoshimoto, Tomohiro
Yoshimoto**

The Cytokine Network:

The Cytokine Network Frances R. Balkwill, 2000 Cytokines are soluble mediators of intercellular communication. They contribute to a chemical signalling language that regulates development, tissue repair, haemopoiesis, inflammation and the immune response. Potent cytokine polypeptides have pleiotropic activities and functional redundancy. They act in a complex network where one cytokine can influence the production of and response to many other cytokines. In the past five years this bewildering array of more than 100 effector molecules and associated cell surface receptors has been simplified by study of cytokine and cytokine receptor structure, elucidation of convergent intracellular signalling pathways and molecular genetics and targeted gene disruption to knock out production of individual cytokines in mice. It is also now clear that the pathophysiology of infectious, autoimmune and malignant disease can be partially explained by the induction of cytokines and the subsequent cellular response. Viral homologues exist for many cytokines and receptors and genetic variations in cytokine production may influence response to pathogenic stimuli. Cytokine and cytokine antagonists have shown therapeutic potential in a number of chronic and acute diseases. *The Cytokine Network* Frontiers in Molecular Biology is not a survey of individual cytokines but guides the reader through the latest research on the cytokine network as a whole, covering genomics, signalling pathways, control of the immune response and therapeutics. *The Cytokine Network* Ziv Frankenstein, 2005

The Cytokine Network and Immune Functions Jacques Thèze, 1999 The great scientific progress in our understanding of the genetics, chemistry, biology and pathophysiology of the cytokines has made clear the need for a comprehensive discussion of these molecules as part of a unified system. *The Cytokine Network and Immune Functions* provides just such a treatment. It represents the efforts of many of the most prominent scientists studying these molecules. Not only does it present a general discussion of each of the major cytokines or sets of cytokines, it deals in detail with how these molecules affect all aspects of immune function and how they contribute to a wide range of pathological conditions. As the title clearly indicates, this book does not treat individual cytokines in isolation; it recognizes that they act in a complex web of synergistic and counter-regulatory effects so as to provide opportunities for the very fine control of immune responses. Cytokine biology is not only a fascinating scientific discipline giving insight into how the immune and inflammatory systems are linked and regulated but also it is a subject of profound importance in modern medicine. As the chapters in the section of this book entitled Cytokines in Pathology indicate, virtually all insults to the organism, be they acute or chronic, call upon cytokine responses and virtually every disease entity has a component involving the function of cytokines. In some diseases, such as allergy and asthma, and many of the autoimmune disorders, abnormal cytokine responses are at the very heart of the disease process; in others, their impact may be more peripheral. There can be no doubt, however, that the study of cytokine biology has contributed greatly to the growing power of molecular medicine, transforming our approach to disease and building a new armamentarium of drugs and other treatments that promise to revolutionize our capacity to control a wide range of disease states. The Cytokine Network in Colorectal Cancer:

Implications for New Treatment Strategies Heidi Braumüller,Bernhard Mauerer,Johanna Andris,Christopher

Berlin,Thomas Wieder,Rebecca Kesselring,2022 Abstract Colorectal cancer CRC is one of the most frequent tumor entities

worldwide with only limited therapeutic options CRC is not only a genetic disease with several mutations in specific oncogenes and or tumor suppressor genes such as APC KRAS PIC3CA BRAF SMAD4 or TP53 but also a multifactorial disease including environmental factors Cancer cells communicate with their environment mostly via soluble factors such as cytokines chemokines or growth factors to generate a favorable tumor microenvironment TME The TME a heterogeneous population of differentiated and progenitor cells plays a critical role in regulating tumor development growth invasion metastasis and therapy resistance In this context cytokines from cancer cells and cells of the TME influence each other eliciting an inflammatory milieu that can either enhance or suppress tumor growth and metastasis Additionally several lines of evidence exist that the composition of the microbiota regulates inflammatory processes controlled by cytokine secretion that play a role in carcinogenesis and tumor progression In this review we discuss the cytokine networks between cancer cells and the TME and microbiome in colorectal cancer and the related treatment strategies with the goal to discuss cytokine mediated strategies that could overcome the common therapeutic resistance of CRC tumors

Cytokine Frontiers Takayuki Yoshimoto,Tomohiro Yoshimoto,2013-10-28 This book guides the reader through the latest research on the cytokine network covering signaling pathways control of the immune response and potential therapeutics Different cytokines stimulate diverse responses in various phases of inflammation and immunity including the innate immune response the generation of effector T cells and the development of antibodies by the humoral immune system It is now clear that the pathophysiology of many infectious autoimmune allergic and malignant diseases can be largely explained by which cytokines are induced and subsequently regulate the cellular responses In clinical medicine cytokines are involved in a wide spectrum of diseases This book describes in three parts the properties and roles of 15 key cytokines under physiological and pathological conditions Part I presents nine cytokines associated with inflammatory disorders pro inflammatory cytokines and the recently identified new helper T Th subset Th17 cells Part II gives details of three cytokines associated with allergic disorders including Th2 responses and recently identified types of innate cells Part III describes three cytokines that are associated with immunological tolerance and anti inflammation including regulatory T Treg cells IL 10 producing Treg Tr1 cells and inducible IL 35 producing Treg iTr35 cells Cytokines are considered to be important as therapeutic targets for specific agonists or antagonists in numerous immune and inflammatory diseases The ultimate goal of this book is to facilitate the development of

therapeutic treatments for such diseases which has been limited by an insufficient understanding of the biology of cytokines and the complicated network that they create

Cytokines in Pulmonary Disease Thomas Martin, 2000-01-18 Focusing on the role of the cytokine network in promoting immunity this superb interdisciplinary collection intensively investigates the behavior of inflammatory mediators in the pathogenesis and resolution of pathogen specific pulmonary infections highlighting recent basic findings and discussing the latest results of clinical trials Defines the vital role that cytokines play in host defense and the pathophysiology of infections associated with pulmonary disease emphasizing the potential of immunomodulators and gene therapy in treatment *Cytokines in Pulmonary Disease* provides state of the art knowledge of the field of cytokines and pulmonary diseases in a single authoritative source reviews the roles of cytokines in pathogen specific infections including tuberculosis HIV related infections fungal pneumonias cystic fibrosis and other disorders assesses the rationale and efficacy of new approaches in both the prevention and treatment of pulmonary infectious disease examines the clinical applications and impact of cytokines in pulmonary disease and more Written by leading international authorities in their respective fields *Cytokines in Pulmonary Disease* will find a place on the bookshelves of specialists in pulmonary and critical care medicine infectious diseases surgery immunology microbiology cell and molecular biology and medical school and graduate students in these disciplines

Cytokines in Cancer Therapy Frances R. Balkwill,1989 Cytokines a broad class of proteins have a role in fighting infection and in mounting an immune response in mediating cell differentiation and embryogenesis in promoting cell growth and in inhibiting growth or causing cell death Recent advances in cell culture monoclonal antibodies and recombinant DNA technology have made it possible to isolate these proteins and to obtain sufficient quantities to conduct clinical studies as well as laboratory experiments Thus the foundations have been laid for a new form of cancer therapy and for understanding how abnormalities in the cytokine network could contribute to the process of malignancy Up to date and comprehensive this book brings together current research and discusses it in the context of its present and potential clinical application The book is intended for cancer researchers clinical oncologists and those involved in the pharmaceutical and biological product industries

Lithium and the Cell Nicholas J.
