Reckoning with Colin Rowe Emmanuel Petit, 2015-02-20 While the first half of the 20th century in architecture was to a large extent characterized by innovations in aesthetics accompanied by succinct and polemical manifestoes the post war decades saw emerge a more refined and intellectual disciplinary framework that eventually metamorphosed into the highly theory focused moment of the postmodern Colin Frederick Rowe 1920 1999 was a leader of this epistemic shift due to his aptitude to connect his historical and philosophical erudition to the visual analysis of architecture This book unites ten different perspectives from architects whose lives and ideas intersected with Rowe s

including Robert Maxwell Anthony Vidler Peter Eisenman O Mathias Ungers L on Krier Rem Koolhaas Alan Colquhoun Robert Slutzky Bernhard Hoesli Bernard Tschumi With an introduction by Emmanuel Petit and a postscript by Jonah Rowen In their critical assessment of a key 20th century formalist these renowned architects reflect on how their own positions came to diverge from Rowe s Reckoning with Colin Rowe is a thought provoking discussion of key schools places concepts and people of architectural theory since the post war years illustrated with over forty beautiful black and white drawings and photographs

Beyond Digital Mario Carpo,2023-04-18 Recasting computational design a new modern agenda for a post industrial post pandemic world Mass production was the core technical logic of industrial modernity for the last hundred years architects and designers have tried to industrialize construction and standardize building materials and processes in the pursuit of economies of scale But this epochal march of modernity is now over In Beyond Digital Mario Carpo reviews the long history of the computational mode of production showing how the merger of robotic automation and artificial intelligence will stop and reverse the modernist quest for scale Today s technologies already allow us to use nonstandard building materials as found or as made and assemble them in as many nonstandard intelligent adaptive ways as needed the microfactories of our imminent future will be automated artisan shops The post industrial logic of computational manufacturing has been known and theorized for some time By tracing its theoretical and technical sources and reviewing the design theories that accompanied its rise Carpo shows how the computational project long under the sway of powerful antimodern ideologies is now being recast by the urgency of the climate crisis which has vindicated its premises and by the global pandemic which has tragically proven its viability Looking at the work of a new generation of designers technologists and producers Beyond Digital offers a new modern agenda for our post industrial future Cyberspace ,2001 The term cyberspace was first

penned in 1984 by William Gibson in his science fiction novel Neuromancer However the architectural possibilities of this area of design were being investigated well before the term was popularised and with good reason **Digital Architecture Beyond Computers** Roberto Bottazzi,2018-05-31 Digital Architecture Beyond Computers explores the deep history of digital architecture tracing design concepts as far back as the Renaissance and connecting them with the latest software used by designers today It develops a critical account of how the tools and techniques of digital design have emerged and allows

designers to deepen their understanding of the digital tools they use every day What aesthetic spatial and philosophical concepts converge within the digital tools architects employ What is their history And what kinds of techniques and designs have they given rise to This book explores the answers to these questions showing how digital architecture brings together complex ideas and trajectories which span across several domains and have evolved over many centuries It sets out to unpack these ideas trace their origin and permeation into architecture and re examine their use in contemporary software Chapters are arranged around the histories of nine fragments each a fundamental concept embedded in popular CAD applications database layers and fields parametrics pixel programme randomness scanning topology and voxel maxel with each theme examined through a series of historical and contemporary case studies The book thus connects the digital design process with architectural history and theory allowing designers and theorists alike to develop more analytical and critical tools with which to conceptualise digital design and its software
