## **The Dynamic Hip Screw Implant System:**

*The Dynamic Hip Screw Implant System* P. Regazzoni, T. Rüedi, R. Winkquist, M. Allgöwer, 2012-12-06 The AO/ASIF dynamic hip screw DRS has been designed primarily to stabilize trochanteric fractures of the hip Selected fractures of the femoral neck and some subtrochanteric fractures are further indications for the DRS 40 46 The dynamic condylar screw DCS has been developed for fractures of the distal femur and is now being tested clinically The DRS and DCS are carefully coordinated with the preexisting ASIF standard sets of equipment for internal fixation of fractures The concept of a sliding screw for trochanteric fractures is not new The first author describing such an implant was Schumpelick 44 he gives credit to Pohl 22 who was primarily a manufacturer working for Gerhardt Kiinscher Re described the possibility of impaction at the fracture site with a sliding device In the United States Clawson 7 8 introduced the hip screw and found it to be extremely beneficial in trochanteric fractures At approximately the same time Massie 31 32 and Pugh 39 designed the sliding type flange nails which offer similar intramedullary splinting with the possibility of fracture impaction The following chapters describe the concept and design features of the DRS as well as the details of the surgical technique The application of the DRS for different types of fractures is illustrated with clinical examples The results of 268 cases of trochanteric fractures treated with the DRS are presented and compared with results using the angled blade plate and Ender's nails Finally some laboratory tests are described

**The Dynamic Hip Screw Implant System** Pietro Regazzoni, 1985 **The Double Dynamic Martin Screw (DMS)** Karl-Klaus Dittel, Matthias Rapp, 2009-02-13 The scope and importance of hip fractures is almost incomprehensible With a world wide incidence of close to 2 million cases per year these fractures pose a daunting challenge to our ability to affect and treat this epidemic The incidence of these fractures is predicted to grow to 6 million in 2050 including a near term baby boom spike Add the hospital mortality rate of up to 4% and the one mortality of from 8% to 20% and the life ending effect of these fractures becomes a glaring reality Of those who initially survive their fracture about 50% never walk the same again The social problem in the care of these elderly people is enormous Of course any real solution to this problem will include education prevention surgical and hospital treatment protocols long term rehabilitative efforts social justments and a generous contribution of money This publication is primarily directed to the amplification of a new treatment modality that addresses only a fraction of the problem It is however a quantum leap in the evolution of fixation with compression hip screws which are still the gold standard for surgical stabilization of pertrochanteric hip fractures The Dynamic Martin Screw DMS addresses the issue of adjustability of the fixation angle with appropriate mechanical strength characteristics that were la ing in its historical predecessors *AO/ASIF Instruments and Implants* Rigmor Texhammar, Christopher Colton, 2013-03-14 The original AO ASIF Instrumentation manual presented a concise and complete description of the AO instruments Thoughtfully developed by Fridolin Sequin and Rigmor Tex hammar the manual discussed in a clear fashion the purpose and care of the various AO instruments that are handled by the operating room staff

One important feature of the first edition was a detailed checklist of the instruments required for the more common operative procedures for treating fractures. Fridolin Sequin was well suited to author the first edition; his 15 years of experience as a technical engineer for the AO gave him in-depth knowledge of AO instruments, and he drew on the clinical knowledge of Rigmor Texhammar, a consultant and director of the AO courses for nurses. Its original feature of combining a column of text with a column of illustrations meant the manual quickly became accepted as a standard. By 1981, translations could be found in English, French, Spanish, and Italian. Not surprisingly, the manual was very popular.

**The Double Dynamic Martin Screw (DMS)** Karl-Klaus Dittel, Matthias J. Rapp, 2009-08-29. The scope and importance of hip fractures is almost incomprehensible. With a world-wide incidence of close to 2 million cases per year, these fractures pose a daunting challenge to our ability to affect and treat this epidemic. The incidence of these fractures is predicted to grow to 6 million in 2050, including a near-term baby boom spike. Add the hospital mortality rate of up to 4% and the one mortality of from 8% to 20% and the life-ending effect of these fractures becomes a glaring reality. Of those who initially survive their fracture, about 50% never walk the same again. The social problem in the care of these elderly people is enormous. Of course, any real solution to this problem will include education, prevention, surgical and hospital treatment protocols, long-term rehabilitative efforts, social adjustments, and a generous contribution of money. This publication is primarily directed to the amplification of a new treatment modality that addresses only a fraction of the problem. It is, however, a quantum leap in the evolution of fixation with compression hip screws, which are still the gold standard for surgical stabilization of pertrochanteric hip fractures. The Dynamic Martin Screw DMS addresses the issue of adjustability of the fixation angle with appropriate mechanical strength characteristics that were lacking in its historical predecessors.
