socioeconomic spectra can be captured including politics financial markets and consumer patterns Another area of potential application would be to augment various game software and of course it would be applicable for the man machine connect The book guides the reader on how to develop and produce a machine generated virtual mind in a step by step manner It is a must for anyone with an interest in artificial intelligence the design and construction of the next generation of computer logic and it provides an enhanced understanding of mankind s greatest mystery the workings of the mind Niklas Hageback has extensive experience of risk modelling and financial analytics working at tier one financial institutions and consulting firms such as Deutsche Bank KPMG and Goldman Sachs where he held regional executive risk management and oversight roles in both Europe and Asia
