The Solar System And Beyond Chapter Resources:

Energy Resources for Human Settlement in the Solar System and Earth's Future in Space William A. Ambrose, James F. Reilly II, Douglas C. Peters, 2013-03-14 The book's purpose is to provide the quantitative foundation for beginning to think about developing energy and minerals outside of Earth's atmosphere that are necessary to support scientific missions, space and extra-terrestrial scientific stations and permanent colonies and ultimately expand Earth's economy beyond the near-Earth environment to include space resources. We cannot envision a situation where all resources required for future space activities are exported from Earth; therefore, this book clearly illustrates that an effective economy is possible beyond Earth's surface when we consider the resources available in near-Earth space. Our first audience is members of AAPG (American Institute of Mining, Metallurgical and Petroleum Engineers), AIME, and other professionals engaged in energy and resource development. As energy professionals, we are concerned on a daily basis with providing the necessary energy and minerals required for our growing world population and the increasing standard of living that comes with ample energy availability. And more than anything else, AAPG members are explorers. We are the professionals who have pushed back the boundaries of our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made available by our advances in technology. There are more similarities than differences between deepwater exploration and development and space exploration. Beyond our own members, however, our audience is every rational human being who understands human health and well-being; quality of life, education, and freedom are dependent on the energy and minerals that support our advanced civilization. Space is the next frontier, and as the world civilization expands beyond Earth's surface, we hope this publication serves to illustrate there are abundant opportunities to support and maintain and, in fact, allow to prosper civilization's expansion into space. Publisher's website: *Building a Space-Faring Civilization* Michael Schmidt A., Marianne Legato J., 2025-02-03 *Building a Space-Faring Civilization: Advancing the Renaissance of Science, Medicine, and Human Performance in Civilian Spaceflight* explores an expanding, unique new trajectory for humankind: the settlement of space by civilians. For the first time in history, average humans can contemplate journeys to Earth orbit, the Moon, and Mars with the idea of space settlement as a plausible reality. As the numbers of spacefaring civilians grow, medical personnel will be asked to meet their complex needs through an ever-expanding discipline: space medicine. But this will require a rapidly advancing science to address what some are calling the next great age in space. This book gathers some of the most accomplished thought leaders in the field of human spaceflight today. Collectively, they helped build the international space station, ISS; develop the field of orbital medicine; guide the development of commercial orbital platforms; plan missions to the Moon and Mars; and forge the innovation necessary for the commercial spaceflight industry to thrive today. The result is an exceptional source of wisdom, experience, and insight surrounding the current biomedical, technical, industrial, legal, and social

implications of what is emerging as a true renaissance period in human history Describes the lessons learned from past explorers from the Renaissance to the present and how they can guide space exploration today Characterizes the risks encountered in the exploration and settlement of different domains of space Surveys the types of medical incidents civilian space travelers are likely to encounter based on professional astronaut reports Summarizes the types of biomedical assessment civilian space travelers will require in order to ready themselves for the dangers of space Explores the types of preparation training and medical countermeasures needed to live and work in space *Astronomy* Michael A.
