Rojo, Alberto Rojo, Anthony Bloch, 2018-03-29 This text brings history and the key fields of physics together to present a unique technical discussion of the principles of least action Universal Aspects of Scientific Practice: Commitment, Methodology, and Technique Giora Hon, Bernard R. Goldstein, 2023-11-04 This book provides a unique

contribution to philosophy of science from the perspective of the practice of science. It focuses on processes that generate scientific knowledge and seeks general and universal features that characterize scientific practice. Features that are inherent to the practice of science. Science is an activity and the scientist is an agent who pursues some practice which in one way or another engages evidence. In science claims to knowledge are typically supported by argument that engages evidence at some point in explanation, in prediction or indeed in any mode of presenting data and its interpretation. Thus the practice of science includes at least three elements so that an argument can be formulated: presuppositions, modes of inference and consequences that relate to evidence. The authors discuss in detail eight cases in chronological order with which they illustrate how commitment, methodology and technique come into play in the practice of an individual physicist or a group of researchers in the physical sciences. Each case highlights aspects of the roles these categories play in scientific practice where the goal is to generate and extend scientific knowledge.

Acoustic Interactions With Submerged Elastic Structures - Part I: Acoustic Scattering And Resonances Ardeshir Guran, Jean Ripoche, Franz Ziegler, 1996-08-30

The interaction of acoustic fields with submerged elastic structures both by propagation and scattering is being investigated at various institutions and laboratories world wide with ever increasing sophistication of experiments and analysis. This book offers a collection of contributions from these research centers that represent the present state of the art in the study of acoustic elastic interaction being on the cutting edge of these investigations. This includes the description of acoustic scattering from submerged elastic objects and shells by the Resonance Scattering Theory of Flax, Dragonette and berall and the interaction of these phenomena in terms of interface waves. It also includes the use of this theory for the purpose of inverse scattering i.e. the determination of the scattered objects properties from the received acoustic backscattered signals. The problem of acoustically excited waves in inhomogeneous and anisotropic materials and of inhomogeneous propagating waves is considered. Vibrations and resonances of elastic shells including shells with various kinds of internal attachments are analyzed. Acoustic scattering experiments are described in the time domain and on the basis of the Wigner Ville distribution. Acoustic propagation in the water column over elastic boundaries is studied experimentally both in laboratory tanks and in the field and is analyzed theoretically. Ultrasonic nondestructive testing including such aspects like probe modelling, scattering by various types of cracks, receiving probes and calibration by a side drilled hole is also studied in details. A comprehensive picture of these complex phenomena and other aspects is presented in the book by researchers that are experts in each of these domains giving up to date accounts of the field in all these aspects.

**Representing Electrons** Theodore Arabatzis, 2006 Both a history and a metahistory. Representing Electrons focuses on the development of various theoretical representations of electrons from the late 1890s to

1925 and the methodological problems associated with writing about unobservable scientific entities Using the electron or rather its representation as a historical actor Theodore Arabatzis illustrates the emergence and gradual consolidation of its representation in physics its career throughout old quantum theory and its appropriation and reinterpretation by chemists As Arabatzis develops this novel biographical approach he portrays scientific representations as partly autonomous agents with lives of their own Furthermore he argues that the considerable variance in the representation of the electron does not undermine its stable identity or existence Raising philosophical issues of contentious debate in the history and philosophy of science namely scientific realism and meaning change Arabatzis addresses the history of the electron across disciplines integrating historical narrative with philosophical analysis in a book that will be a touchstone for historians and philosophers of science and scientists alike    **Sommerfeld's Concepts of Taxation** Silvia A.
